

Контактный лист персонажа версии 2.0:

Act as a professional Storyboard Artist.
Generate ONE horizontal image (16:9, 3840×2160px).
The image contains a 3x3 grid of 9 panels — 3 columns, 3 rows.

BACKGROUND — ALL 9 PANELS:

Pure white (#FFFFFF). No environment. No props.
No shadows. No ground plane. No gradients. No reflections.
The subject must appear fully isolated on clean white.

GRID STRUCTURE & LABELS:

Grid layout — exactly this arrangement:

A1 | A2 | A3

B1 | B2 | B3

C1 | C2 | C3

Separator lines: 1px, light grey (#CCCCCC).

Label style — MINIMAL:

- Each panel has its code (A1, A2 etc.) in the TOP-LEFT corner.
 - Font: tiny, thin-weight sans-serif.
 - Color: medium grey (#888888).
 - No background behind label. No box. No outline. No bold.
 - Labels are barely noticeable — for reference only.
 - No other text, titles, or annotations anywhere.
-
-

REFERENCE IMAGE — ABSOLUTE LAW:

The attached reference image is the ONLY source of truth.
This prompt works for ANY subject type:
person, animal, creature, object, clothing item,
accessory, vehicle, product, or any other subject.

Reproduce exactly from the reference:

- Overall shape, silhouette, and proportions
- All surface details: color, texture, material, pattern, finish
- All identifying features: markings, logos, labels, hardware, stitching, seams, fastenings, parts, components
- Any unique traits: wear, damage, decoration, embellishment
- For living subjects: face, skin/fur/scale tone, hair/coat, expression potential, body structure

NEVER change, simplify, add, or remove anything.

NEVER reinterpret or stylize.

NEVER add background, ground, or environmental elements.

NEVER introduce creative decisions — only replicate.

The reference overrides all default assumptions.

If any detail is unclear in the reference — reproduce it as closely as possible. Do NOT invent substitutes.

FRAMING RULES — STRICTLY BY ROW:

ROW A — FULL SUBJECT (Complete View):

!!MANDATORY!! Every panel in Row A must show the subject in its entirety — from the absolute top to the absolute bottom.

Nothing cropped. Small white margin above and below.

For standing subjects: top of head to bottom of feet/base, footwear or base fully visible.

For objects/items: entire object fits in frame with margin.

A1 — Complete view. Eye-Level. FRONT VIEW (0°).

Subject faces camera directly.

A2 — Complete view. Eye-Level. THREE-QUARTER VIEW (45° right).

Subject rotated 45° to the right.

A3 — Complete view. Eye-Level. SIDE PROFILE (90°).

Strict side view. Full silhouette visible.

ROW B — UPPER HALF (Top 50% of Subject):

!!MANDATORY!! Every panel in Row B must show the subject from the top down to the midpoint (waist for figures, halfway point for objects).

Top of subject MUST have a small white margin — never cropped.

Bottom crop line = at the midpoint. Lower half not visible.

B1 — Upper half. Eye-Level. FRONT VIEW (0°).

B2 — Upper half. Eye-Level. THREE-QUARTER VIEW (45° right).

B3 — Upper half. Eye-Level. BACK VIEW (180°).

Subject turned fully away from camera.

ROW C — CLOSE DETAIL (Top 25% or Key Detail):

!!MANDATORY!! Every panel in Row C must be a tight close-up showing only the upper portion or most identifying detail area.

For figures: head and shoulders / collar area only.

For objects: the primary feature, label, face, or detail area.

Top of subject MUST have a small white margin — never cropped.

C1 — Close detail. Eye-Level. FRONT VIEW (0°).

C2 — Close detail. LOW ANGLE (slightly below centre axis).

THREE-QUARTER VIEW (45°). Subject appears larger, dominant.

C3 — Close detail. Eye-Level. BACK THREE-QUARTER VIEW (135°).

Rear-facing, slightly to the side. Back detail visible.

Определенная последовательность одной сцены в сетку (из 2 изображений)

Act as a Lead Storyboard Artist and Cinematographer for a high-budget film production. Generate ONE horizontal image (16:9, 3840×2160px) containing a 3x3 grid storyboard sequence that visually narrates a dynamic cinematic scene.

OUTPUT FORMAT:

- Single horizontal image, 16:9, 3840×2160px.
- Layout: 3 columns × 3 rows. 9 panels total.
- Each panel is photorealistic, cinematic, ultra-high-detail.
- Separator lines: 1px, light grey (#CCCCCC).

GRID LABELS — MINIMAL:

Grid layout — exactly this arrangement:

A1 | A2 | A3

B1 | B2 | B3

C1 | C2 | C3

- Each panel labeled in TOP-LEFT corner: A1, A2 ... C3.
- Font: tiny, thin-weight sans-serif.
- Color: medium grey (#888888).
- No background behind label. No box. No bold. No outline.
- No other text, titles, or annotations anywhere.

REFERENCE IMAGES — ABSOLUTE LAW:

TWO reference images are provided. Use both simultaneously.

REF 1 — HERO IMAGE (Identity Source):

Defines the subject's core identity. Extract and lock:

- Face, skin tone, hair (color, length, texture, styling)
- Body proportions and physical build
- Complete outfit: every layer, color, texture, material, fastenings, logos, insignia, accessories
- Any unique physical traits or identifying details

This reference answers: WHAT does the subject look like.

REF 2 — CONTACT SHEET (Spatial Reference):

The 3x3 grid shot sheet from the previous step.

Use it to maintain visual fidelity from every camera angle:

- How the costume looks from behind, side, three-quarter
- How proportions hold at different framings
- Material behavior and detail visibility at each angle

This reference answers: HOW the subject looks from any direction.

CONSISTENCY RULE — NON-NEGOTIABLE:

- The subject must look identical across all 9 panels.

- Replicate every detail 1:1 from both references.
 - Never simplify, recolor, or reinterpret any element.
 - Never add or remove costume/accessory details.
 - If angle creates ambiguity — use REF 2 to resolve it.
 - Both references override all creative defaults.
-
-

SCENE ELABORATION:

Based on USER SCENE INPUT below, autonomously craft a complete cinematic scene. Define and maintain consistently across all panels:

- Specific location and environment
- Time of day and natural light conditions
- Weather and atmospheric effects
- Mood, color palette, and visual tone

CONSTRAINTS on elaboration:

- Do not change the setting or time of day stated by the user.
 - Do not introduce new named characters not mentioned.
 - Do not contradict any explicitly stated fact.
 - Stay within the emotional tone specified by the user.
 - When details are missing — infer logically from genre and mood.
-
-

CINEMATIC QUALITY STANDARDS:

- Photorealistic render. No illustration. No painterly style.
 - Lifelike textures: skin, fabric, metal, concrete, atmosphere.
 - Professional cinematic lighting: direction, quality, temperature.
 - Motion blur where movement occurs (running, impact, debris).
 - Cinematic depth of field: sharp subject, environment falls off.
 - Color grade consistent across all 9 panels.
 - This grid is a direct visual blueprint for AI video generation — every frame must be production-ready.
-
-

NARRATIVE ARC & SHOT SEQUENCE:

The 9 panels tell a clear, chronological visual story:

ROW A — SCENE ENTRY (Establish & Introduce):

Introduce the location, atmosphere, and subject.

Build context and initial tension.

A1 — Wide Shot (WS) or Extreme Wide Shot (EWS).

Establish full environment. Subject small in frame.

A2 — Medium Shot (MS). Subject enters or is revealed.

Body language communicates intent or emotion.

A3 — Close-Up (CU). Face or key detail.

Establish emotional state before action begins.

ROW B — PEAK ACTION (Conflict & Intensity):

The core of the scene. Maximum energy and dynamic tension.

B1 — Dynamic angle (Low Angle / Dutch Angle / POV).

First major action beat. Motion blur if applicable.

B2 — Medium Shot (MS). Central action moment.

The decisive beat — impact, decision, confrontation.

B3 — Wide Shot (WS) or Over-the-Shoulder.

Spatial consequence of the action. Stakes are visible.

ROW C — RESOLUTION (Consequence & Close):

The scene lands. Emotional or physical aftermath.

C1 — Medium Shot (MS). Immediate aftermath or reaction.

Subject in the moment after the peak beat.

C2 — Close-Up (CU). Face or telling detail.

Emotional resolution, exhaustion, or revelation.

C3 — Wide Shot (WS) or Extreme Wide Shot (EWS).

Final frame. Scene closes. World after the action.

USER SCENE INPUT:

[DESCRIBE YOUR SCENE HERE]

Format: 2–4 sentences.

Include: location, time of day, main action, emotional tone.

Example:

"A rooftop chase at dusk in a rain-soaked neon city. The hero pursues an armed figure across glass canopies and steel ledges. Atmosphere of desperation, speed, and near-loss of control."

Запрос на одно изображение из сетки:

Act as a professional Digital Imaging Technician and Cinematographer.
Generate ONE single standalone cinematic photograph by isolating and rendering a specific panel from the provided 3x3 storyboard grid.

OUTPUT FORMAT:

- Single standalone image. No grid. No panels. No borders.
 - Resolution: 3840×2160px (16:9) or 2160×2160px (1:1) — match the aspect ratio of the target panel.
 - Photorealistic render. No illustration. No painterly style.
 - Remove ALL panel labels, grid lines, separator marks, compression artifacts, and composite borders from source.
-
-

TARGET PANEL:

Isolate and render this panel: [**INSERT CODE: e.g. B2**]

Valid codes:

A1 | A2 | A3

B1 | B2 | B3

C1 | C2 | C3

If the specified code does not exist in the grid —
stop and ask for clarification. Do not guess or substitute.

REFERENCE IMAGES — TWO SOURCES, TWO ROLES:

TWO reference images are provided. Each has a strict,
separate function. Never mix their roles.

REF 1 — SUBJECT REFERENCE (Identity Only):

Source: original hero portrait or character reference image.

Use ONLY to replicate the subject's physical identity:

- Face: structure, skin tone, eye color/shape, hair
- Body: proportions, build, posture
- Complete outfit: every layer, color, texture, material, fastenings, logos, insignia, accessories, footwear
- Any unique physical traits or identifying details

This reference defines WHAT the subject looks like.

It has NO authority over lighting, environment, or mood.

Do not borrow any lighting or color tone from this image.

REF 2 — SCENE GRID (Environment & Light):

Source: the 3x3 storyboard grid (Contact Sheet or Scene Grid).

Use ONLY to extract the visual world of the target panel:

- Environment: location, architecture, surfaces, depth
- Lighting: direction, quality (soft/hard), color temperature
- Contrast ratio, shadow depth, highlight behavior
- Atmospheric effects: fog, haze, rain, dust, particles
- Color palette, mood, time of day, weather
- Overall visual tone and color grade

This reference defines WHERE and HOW the scene looks.

It has NO authority over the subject's physical appearance.

CONFLICT RESOLUTION RULE:

If lighting in REF 1 contradicts lighting in REF 2 —

REF 2 ALWAYS wins. Adapt the subject's appearance naturally to the scene's lighting conditions.

The subject must feel native to the scene, not composited.

RENDERING STANDARDS:

- Reproduce the exact camera angle, framing, and shot size of the target panel with absolute compositional precision.
 - Lifelike textures: skin, fabric, metal, concrete, atmosphere.
 - Professional cinematic lighting matching REF 2 panel exactly.
 - Cinematic depth of field: sharp subject, environment falls off.
 - Motion blur only if present in the source panel.
 - Color grade consistent with REF 2 scene tone.
 - Final image must feel like a frame extracted from a high-budget film — production-ready, zero artifacts.
-
-
