

Ботанический арт из лепестков

A creative botanical collage depicting a man and a girl dancing a waltz in the moonlight.

Silhouettes formed from leaves, petals, stems, and berries.

Glossy textures covered with dew, macro photography details.

A soft background in the style of bokeh.

8K, 16:9.

Облака с секретом

A dramatic sky photo where storm clouds naturally form the shape of a "лев".

Include realistic sunlight rays and atmospheric contrast.

No fantasy glow. Photorealistic cloud behavior.

4K cinematic photography.

Фильмы как мини-диорамы

Present a 45° top-down isometric miniature 3D cartoon scene of [Squid Game] from [кукла, поле, маленькие игроки].

Include a raised diorama base, recognizable elements, and tiny stylized characters.

Use a clean solid background.

Display the movie title and scene name at the top.

Square 1080x1080.

3×3 кинематографичная сетка. Не забудьте добавить свой референс

A cinematic 3×3 grid presenting multiple camera angles of the same female subject in the same outdoor environment. A female athlete in a red windbreaker and black leggings stretches beside a foggy trail in the early morning countryside. Lush greenery surrounds her with faint sunlight cutting through the mist, and dew glistens on the grass. Each frame shows

a distinct shot: extreme close-up, medium shot, over-the-shoulder, wide shot, high-angle top-down, low-angle, profile, three-quarter rear view, and full back view. Lighting style: soft dawn light with a pale sky gradient, light mist in the background, and cool atmospheric tones. Ensure consistent subject appearance across all frames, with identical outfit, lighting direction, and pose variation. Cinematic framing, shallow depth of field, film-still aesthetic, realistic camera angles, professional cinematography reference sheet. Ultra-realistic, sharp, 8K photography look.

Ты под северным сиянием

A stunning night shot shows the person attached in the uploaded reference image (keep the face 100% accurate) standing on snowy ground under bright green northern lights. They smile while looking at the sky. Aspect ratio 16:9

Глянцевый рекламный кадр с продуктом. Не забудь добавить свой референс.

Create a glossy commercial photo featuring a woman in a high-fashion outfit sitting sideways on a giant can of "Adrenaline Rush".

Her left leg is bent and resting on top of the can.

Her right leg is lowered toward the floor, extended slightly forward.

She leans slightly back, supported by her right arm resting behind her on the can.

With her left hand, she confidently holds a normal-sized matching can near her knee.

Important:

The product must exactly match the uploaded reference image of Digital Assets Energy Drink without altering its shape, logo, or label.

Use glossy commercial lighting, a solid black background with a faint blue glow matching the can, and a three-quarter body studio shot.

Professional, 4K-resolution, vibrant and ad-ready.

Парящий город-остров

Create an ultra-high-definition digital poster featuring a miniature island shaped like {Стамбул} floating above clouds.

Integrate iconic landmarks and natural landscapes.

Carve the word "{Стамбул}" into the terrain using colossal 3D letters.

Add cinematic lighting, birds, aerial perspective.

4K+, 16:9.

Страна из еды

Recreate a top-down food art scene depicting the country of Китай, sculpted entirely from traditional dishes and ingredients native to the region.

Include iconic landmarks made from food, terrain features shaped by staple ingredients, and playful edible elements.

Style: extreme food art on a dark slate board, macro photography, dramatic overhead lighting, rich textures.

Фото, которое «выливается» наружу

A hyper-realistic 3D photo concept showing a hand holding a square polaroid photo labeled “вода”.

Inside the photo, there’s a close-up of вода, and it flows seamlessly out of the photo frame into the real world, interacting with the surface below.

The text “вода” appears printed on the white border of the photo.

Realistic cinematic lighting, ultra-detailed textures, 16:9 format.

Таймсплит: одно место, две эпохи

A horizontal split-screen cinematic shot of Презентация лампочки Эдисона, seamlessly blending two different eras: {Era_A} on the left and {Era_B} on the right (default: about 100 years ago vs. present day).

On the left side ({Era_A}): show era-appropriate architecture, interior or environment design, materials, vehicles, and props that clearly belong to that historical period. People wear authentic clothing from {Era_A}, including hairstyles, accessories, and typical items in their hands.

On the right side ({Era_B}): show the same {Scene} in the modern era, with updated architecture, contemporary materials, modern vehicles, and current technology.

In the center: the two eras merge and overlap organically. People from different times interact, buildings morph from old to new, and props transform mid-frame.

Photorealistic, 8K resolution, cinematic lighting, wide angle, highly detailed textures.

Город летающий в облаках меняется название, время года и время суток. Это мастер промт для генерации основного промпта через GPT.

CITY: {CITY}

TIME_OF_DAY: {TIME_OF_DAY}

SEASON: {SEASON}

You are: Web Researcher + Senior 3D Art Director + Nano Banana prompt engineer.

Target look: match the “floating Istanbul-style island” poster: island fills most of frame, central water channel, landmark-heavy, huge carved 3D city name on the front cliff — with rich facade detail (windows/doors/roof tiles) and warm window lights.

ALLOWED VALUES

TIME_OF_DAY: midday, golden_hour, sunset, blue_hour, night.

SEASON: spring, summer, autumn, winter.

If provided values differ, map to the closest option above.

ABSOLUTE RULES (stability)

- If web browsing is unavailable: say “Browsing unavailable” and ask the user for 8–12 landmark links or a landmark list; do NOT invent landmarks.
- Keep the same layout, camera style, and overall structure for any city; only landmarks + geography + (time-of-day + season) mood vary.
- The FINAL IMAGE PROMPT must contain the city name exactly ONCE, and only in one line: “Carve exactly this word: ...”.
- Do not write the city name anywhere else (not in sources, not in landmark list, not in negatives).
- No other readable text in the image (no signage, billboards, logos, watermarks, UI, license plates, random letters/numbers).

STEP 1 — WEB PICK (required if available)

Collect 12–16 candidate landmarks + 2–4 geography traits with one reliable URL each.

Score each candidate (1–5): iconic silhouette, text-free readability, diorama suitability.

Select ONLY 4–6 landmarks total for maximum readability.

STEP 2 — SCALE HIERARCHY (no tiny landmarks)

- Choose 1 PRIMARY HERO landmark (largest, closest to camera, unmistakable).
- Choose 1 SECONDARY HERO landmark (large, smaller than primary).
- Choose 2–4 SUPPORT landmarks (medium, framing heroes).
- City fabric is highly detailed but must not compete with heroes.

STEP 3 — OUTPUT EXACTLY THIS

A) SOURCES: bullets “landmark/trait — URL” (do NOT write the city name here).

B) SELECTED LANDMARKS: bullets with short descriptors (do NOT write the city name here).

C) FINAL IMAGE PROMPT: ONE English code block with the fixed layout below.

Inside that code block: enforce the layout + micro-detail + the TIME_OF_DAY and SEASON translations.

Insert the city name exactly once only in the carving line.

TIME_OF_DAY → LIGHTING TRANSLATION (apply inside FINAL IMAGE PROMPT)

- midday: neutral bright sun, crisp shadows, minimal window glow, clean atmosphere.
- golden_hour: warm low sun key, long shadows, romantic glow, some window lights begin.
- sunset: sun near horizon, stronger rim light, richer clouds, more window lights.
- blue_hour: cool sky ambience, warm window glow + streetlights prominent, cinematic contrast.
- night: moonlit/cool ambience, strong practical lighting (windows + streetlights), reflections on water.

SEASON → ENVIRONMENT & MATERIALS TRANSLATION (apply inside FINAL IMAGE PROMPT)

- spring: fresh saturated greens, budding trees, blossoms accents, slightly wet ground, clearer air.
- summer: lush dense greenery, brighter/harsher sunlight, drier surfaces, higher visibility, deeper blue haze.
- autumn: warm palette, orange/red/yellow foliage, fallen leaves on streets/roofs, slightly moist surfaces, soft haze.

- winter: snow accumulation on roofs/ledges/parks, icy edges near water, frosty air haze, colder color temperature; window lights feel warmer by contrast.

(Season must affect vegetation, ground/roof surfaces, and atmospheric haze so it is unmistakable.)

FIXED LAYOUT (reference-style composition)

- Island centered and large, filling ~70–85% of the frame.
- Bottom third dominated by the front cliff with giant carved letters.
- A wide central river/canal/strait cuts through the city top, creating two shores; add small boats for scale.
- Landmark clusters on both shores; PRIMARY HERO near a rule-of-thirds point; clear negative space around it.

FIXED CINEMATIC / 3D SPEC (must be inside FINAL IMAGE PROMPT)

- Ultra-photorealistic cinematic CGI, 4K+, 16:9, fully 3D realism, PBR materials, ray-traced global illumination.
- Camera: medium-wide aerial 3/4 “drone shot”, lower altitude so landmarks and streets are big and legible; deep depth of field (entire island tack-sharp), no tilt-shift blur.
- Clouds: massive multi-layer photoreal volumetric clouds (foreground/mid/far), self-shadowing, realistic scattering, silver linings; a few distant birds for scale.
- Materials: stone/glass/metal/concrete; micro-detail; realistic wear; contact shadows; ambient occlusion.
- Use physically plausible wetness/snow/roughness variation according to SEASON (no plastic look).

CITY FABRIC DETAIL (prevents “box houses”)

- Buildings must NOT be plain boxes: visible windows + frames/mullions, doors, roof tiles, chimneys, balconies/arches (where appropriate), facade trim, material variation (plaster/brick/stone), realistic dirt and roughness variation.
- Windows: varied warm interior emissive glow patterns (not uniform), consistent with TIME_OF_DAY.
- Streets: curb edges, tiny trees, waterfront railings, street lamps; no readable plates or signage.

EARTH-RIPPED PLATFORM

- The island looks violently torn from Earth: exposed stratified soil horizons + rock strata, fractures, crumbling edges, debris, dangling roots, erosion micro-detail.

ONLY TEXT IN IMAGE

- Put gigantic 3D EXTRUDED CHISELED LETTERS on the FRONT-FACING vertical cliff, spanning most of the island width.

- Letters are raised bas-relief (surrounding rock carved away so letters protrude), crisp beveled serif-style block letters, perfectly aligned, extremely readable, micro-chipping, grazing light emphasizing depth.

- Include exactly one line with the city name: Carve exactly this word: <city name from the first line>

Exclude (must be inside FINAL IMAGE PROMPT)

- Any other readable text, signage, logos, watermarks, UI, decals, painted typography, floating letters, distorted/gibberish characters, haze covering the carved letters, over-sharpening halos.

FINAL SILENT CHECK BEFORE OUTPUT

- City name appears exactly once, only in the carving line inside FINAL IMAGE PROMPT.

- TIME_OF_DAY and SEASON are clearly visible through light, sky tone, vegetation, and material conditions without adding any text.
