

MASTER PROMPT FOR IMAGE: Генерируем гигантскую диораму вау-эффект в формате длинного видео 16:9

Use the photo I uploaded as the primary identity reference.

The person in the image must 100% resemble the original photo, including facial shape, skin tone, hair, posture, and clothing—without any alterations to character or features.

The subject is working on a large-scale tabletop diorama that is an exact, hyper-realistic, cinematic night scene replica of [YOUR IDEA] inside an indoor studio workspace.

The diorama represents the real [YOUR IDEA] and its surrounding area exactly as it exists in reality, with accurate architecture, proportions, textures, materials, lighting placement, courtyard layout, domes, minarets, pathways, and surrounding buildings — everything matching the real location.

Although the scene is scaled down in size, the diorama does not look like a model or toy.

It looks like a real place photographed from above, except for the visible presence of the man's hands working on it, clearly indicating it is a scale replica.

The buildings have realistic stone textures, authentic colors, true-to-life surface detail, real architectural depth,

The man is leaning forward, carefully adjusting elements with his hands, reinforcing that this is a physical, real-world replica, not CGI or a simplified model.

Indoor workshop environment with a large table.

Soft overhead studio lighting combined with realistic ambient light.

Shallow depth of field focused on the diorama and hands.

Ultra-photorealistic DSLR photography, 35mm lens, cinematic realism.

Natural colors, realistic shadows, correct scale perception.

No stylization, no toy look, no simplified model appearance.

The scene must look like a real place recreated perfectly at a smaller scale.

CAMERA ANGLES:

Угол наклона сверху вниз (45° сверху)

The camera faces downward, focusing on the hands and details of the diorama, with only a partial view of the face.

Снимок под боковым углом/в профиль

The camera is to the left or right of the subject, showing the silhouette of the face and the activity of the hands as they assemble the miniature.

Выстрел через плечо

The camera is behind the subject's shoulder, highlighting the diorama as the main focus, with the hands in the foreground.

Детальный снимок крупным планом

Tight framing of the hands and small elements in the diorama, with the face blurred in the background (shallow depth of field).

Съемка с близкого расстояния под низким углом

The camera is slightly lower than the workbench, giving the diorama a larger and more dramatic scale.

MOTION PROMPT:

Smooth and realistic movements.

The subject performs micro-activities naturally:

Fingers move slowly, assembling small parts of the diorama

Hands pause for a moment, then adjust the position of the miniature object

Subtle breathing movements are visible in the rise and fall of the shoulders

Head tilts slightly forward and then returns to neutral, indicating focus

No excessive movements, the work rhythm is calm and precise

Motion is slow, controlled, documentary-style, with no jitter or extreme pose changes.

CAMERA MOVEMENTS — движение камеры

Top-down 45° (from above)

Camera performs a slow vertical drift downward

Slight horizontal micro-pan following the hand movement

Focus remains on the details of the diorama

Side angle / profile

Slow lateral slide from back to front

Slight parallax between hand and diorama

No sharp camera rotation

Over-the-shoulder

Static camera with a subtle forward push-in

Foreground (shoulder) moves slightly following the breath

Diorama remains the main focus

Close-up detail

Very slow push-in (macro feel)

Depth of field changes slightly following the hand

Camera movement is barely noticeable

Low angle close shot

Slow upward tilt (very slight)

Gives the impression of a larger scale in the diorama

Steady, cinematic movement, without shake

Epic drone reveal (взлёт + раскрытие)

Use the uploaded image as the exact starting frame (frame 1 must match the photo 1:1, no initial jump).

5s CAMERA MOVE: Epic drone reveal — the camera slowly rises and drifts backward, gently tilting down to reveal more of the scene; smooth cinematic glide; subtle parallax; hold steady last 0.5s.

STABILITY: keep scene unchanged, no morphing/warping, no new objects, stable lighting, no flicker.

PROMPT 1 Генерируем простую диораму в формате shorts, tik-tok, pinterest короткое видео 16:9

Gunakan foto yang saya unggah sebagai **referensi identitas utama**.

Orang dalam gambar harus **100% menyerupai foto asli**, meliputi bentuk wajah, warna kulit, rambut, postur tubuh, dan pakaian — tanpa perubahan karakter atau fitur.

Subjek sedang **duduk di ruang kerja** dan dengan teliti **mengerjakan sebuah diorama miniatur berskala kecil**.

Tangannya aktif menyentuh dan menyusun bagian-bagian kecil diorama, menunjukkan fokus dan ketelitian.

Tema diorama:

👉 [Stadion santiago bernabeu, madrid]

Model miniatur dibuat sangat detail: bangunan realistis, tekstur permukaan jelas, jalanan kecil, pepohonan mini, dan elemen lingkungan berskala presisi.

Suasana **workshop indoor**, dengan cahaya alami lembut masuk dari arah samping (jendela).

Pencahayaan sinematik realistis, depth of field dangkal yang menonjolkan subjek dan miniatur.
