

ПРОМПТЫ ДЛЯ SEEDANCE 2.0

Принципы Seedance 2.0 (из официального документа)

Прежде чем начать — ключевые правила, на основе которых проводился анализ каждого промпта:

- Естественный язык — никаких формальных тегов, описывай *кто / что / где / как движется / в каком стиле / с какой атмосферой*
- Многошотовая структура — используй последовательность «сначала... затем... наконец...» чтобы модель автоматически создавала смену планов с переходами
- @-референсы — при загрузке ассетов: @Image1 — внешность персонажа, @Video — движение камеры, @Audio — ритм и настроение
- Лимиты — до 8 изображений, 3 видео и 3 аудиодорожки одновременно, видео до 15 секунд
- Физический реализм — модель автоматически просчитывает траектории, столкновения, инерцию — опиши детально
- Аудио синхронизировано — звук и видео генерируются одновременно, аудиоинструкции встраиваются прямо в промпт

An intense cinematic fight sequence unfolds during a violent thunderstorm at night. First, a wide shot establishes a masked ronin gripping an enormous katana, standing on cracked stone earth as lightning illuminates the sky above a colossal shadowy beast. Then the ronin screams – black smoke and surging electricity erupt along the blade – he stomps the ground, shattering the earth beneath his feet and sending debris flying outward. In a burst of speed he charges forward, slashing diagonally across the creature's massive chest. Cut to a close-up of the blade tearing through dark scaled flesh, electricity arcing on impact with a deafening thunderclap. Finally, the colossal creature staggers, its legs buckle with

a heavy ground-shaking collapse, dust and dark energy erupting outward. The entire sequence uses intense handheld camera motion with frame shake synced to each impact. The sound design includes crackling electricity, howling wind, thunder, and the creature's earth-shaking roar.

1 EPIC FIGHTING SEQUENCES (Эпические Боевые Сцены)

Промпт 1.1 — T2V: Ронин vs Монстр

✓ Улучшенный промпт:

📋 Инструкция по использованию:

- Тип: Text to Video
 - Загружать изображения не нужно
 - Режим: многошотовый — модель сама разобьёт на планы благодаря структуре «сначала/затем/наконец»
 - Рекомендуемая длительность: 10–15 секунд
 - Совет: если хочешь конкретного персонажа — загрузи его изображение и добавь `@Image1 is the masked ronin` в начало промпта
-

Промпт 1.2 — T2V: Уличная драка в Гонконге

✓ Улучшенный промпт:

A cinematic multi-shot fight sequence unfolds in a bustling Hong Kong street food market at night, neon signs reflecting

off wet pavement. First, an angry muscular Chinese thug pushes through the crowded stalls, knocking over bowls, eyes locked on an elderly Chinese male food vendor who calmly keeps working. Then the thug lunges forward throwing a wild punch – the old man sidesteps with surprising ease, using minimal movement. The fight escalates with quick multi-angle cuts showing the vendor deflecting each blow effortlessly using precise counter-movements. Finally the elderly vendor executes a swift, precise kick that sends the thug crashing backwards into a fish display stand – ice, fish, and water exploding everywhere. The crowd in the background continues eating and chatting, completely unfazed by the entire fight. Sound design includes market ambience, sizzling woks, clashing impacts, and the wet thud of the thug landing in the fish stand.

 Инструкция по использованию:

- Тип: Text to Video
- Многошотовая структура уже встроена – модель создаст несколько углов съёмки
- Совет: можно загрузить референсное фото гонконгского уличного рынка через @Image1 для точной стилизации локации

Промпт 1.3 – I2V: Диско-Человек vs Робот-Спикер

 Улучшенный промпт:

@Image1 is the disco man character. A cinematic fight sequence on a color-changing disco dance floor, disco ball spinning overhead, pulsing multicolored lights synced to a funky soul soundtrack. First, @Image1 enters the frame doing exaggerated confident disco dance moves – pointing fingers, hip swings, dramatic poses. Then the speaker robot begins walking

menacingly toward him, its bass speakers vibrating the floor. Suddenly @Image1 runs forward and launches into a spectacular flying kick, hitting the robot square in the chest. Cut to close-up of the robot's speakers cracking, lights on its body flickering and malfunctioning. The robot collapses in slow motion with sparks bursting from its joints. @Image1 straightens up, adjusts his collar, looks directly into the camera and says in a smooth groovy voice: "Oooh! Now that's groovy baby." The entire fight is perfectly timed to the disco music beat, with each hit landing on the downbeat.

 Инструкция по использованию:

- Тип: Image to Video
- Загрузи: изображение диско-человека → назначь как @Image1
- Если есть изображение робота → загрузи как @Image2 и добавь @Image2 is the speaker robot
- Опционально: загрузи аудиофайл с диско-музыкой как @Audio1 — это синхронизирует ритм видео с музыкой
- Диалог должен быть коротким — Seedance 2.0 работает с репликами лучше, если они в кавычках и помещены в конец действия

Промпт 1.4 — T2V: Маг vs Живое Дерево

 Улучшенный промпт:

An epic cinematic battle in a dark enchanted forest at dusk, thick swirling storm clouds above. First, a wide shot reveals an elderly mage in tattered robes standing before a colossal living creature made entirely of ancient bark and twisted roots – a walking tree the size of a building, its hollow eyes glowing amber. Then the mage spreads both arms wide, eyes blazing white, drawing electricity from the storm – bolts of lightning arc between his fingers as he builds energy. Finally

he releases an enormous bolt of lightning directly into the creature's core – the impact is catastrophic, the creature's body shatters outward in massive chunks of burning bark, splinters, roots and soil exploding in all directions. A shockwave of dust, smoke and swirling leaves erupts from the blast point. The scene is chaotic and intense with handheld camera motion. Sound design: roaring thunder, the creature's earth-shaking roar cut short by the crack of lightning, followed by the crash of splintering wood and debris settling.

 Инструкция по использованию:

- Тип: Text to Video
 - Нет необходимости в изображениях
 - Модель поймёт физику взрыва дерева благодаря детальному описанию
 - Длительность: 10–15 секунд – обеспечит полный арк от «нагнетание» до «разрушение»
-

Промпт 1.5 – T2V: Мастера Кунг-Фу (Кот и Шиб-Ину)

 Улучшенный промт:

An intense cinematic kung fu duel at an ancient Chinese temple during a heavy rainstorm.

Water streams off curved roof tiles, red lanterns sway in the storm wind. Two kung fu masters face each other: a white cat in flowing white silk robes, and a shiba inu wearing a dark structured training gi. First, the shiba inu launches a relentless combination of strikes – each impact sends water droplets exploding outward in slow motion. The white cat deflects every blow with minimal elegant movement. Then the white cat vanishes in a burst of white smoke, reappearing instantly behind its opponent,

delivering a precise palm strike to the shiba inu's back. The shiba inu staggers, spins, and counters with a powerful spinning heel kick. The white cat disappears again – this time three smoke afterimages appear simultaneously confusing its opponent. Finally the real white cat descends from above with a finishing aerial strike, sending the shiba inu crashing into a stone pillar. Rain splashes on impact, slow-motion water sheets freeze mid-air around the final blow. Handheld camera with speed ramps on every major strike. Sound: rain, clashing chi energy, the sharp crack of each strike landing.

 Инструкция по использованию:

- Тип: Text to Video
- Антропоморфные животные Seedance 2.0 генерирует хорошо — указывай их одежду и позу детально
- Приём «исчезновение в дыму» описан через *действие*, а не абстрактное слово «магия» — это ключевое правило
- Если результат не устраивает форма дыма — добавь @Image1 с референсом дымового эффекта

Промпт 1.6 — Nano Banana Pro Image:

Лягушки-Самураи

 Улучшенный промпт:

An iconic Japanese ink wash painting with bold, expressive brush strokes and visible ink splatter marks depicts two samurai frogs locked in fierce combat on a patch of grass beside a tranquil lily pond. Both frogs stand upright on two legs in classic

iaido stances, gripping katanas with no visible sheathes. One frog wears a small conical kasa hat. Ink wash style with high contrast, flowing brushwork suggesting motion blur on the blades, sparse background, traditional sumi-e aesthetic.

 Инструкция по использованию:

- Платформа: Nano Banana Pro (генерация изображений)
- Это изображение-источник для следующего I2V промпта 1.7
- После генерации — загрузи результат в Seedance 2.0 как @Image1
- Совет: выбирай вариант с наиболее чёткими позами персонажей для лучшей анимации

Промпт 1.7 — I2V: Анимация Лягушек-Самураев

 Улучшенный промпт:

@Image1 is the ink wash illustration of two samurai frogs. Bring this scene to life in the original Japanese ink wash style, maintaining visible brush strokes throughout all motion. The frog wearing the kasa hat is Fighter A. The other frog is Fighter B. First, both frogs circle each other slowly, katanas raised, tails twitching with tension. Then they clash – blades ring against each other with ink-splash shockwaves erupting from every impact, brush strokes smearing dynamically with each movement. The fight is intense: close dodges, rolls across the grass, blade locks. Cut to close-up of eyes showing fierce determination. Finally, Fighter A (the frog with the hat) executes a sweeping low kick that catches Fighter B off balance, sending him flying sideways into the lily pond with a dramatic splash – ink ripples spread

across the water's surface. Fighter A sheathes an imaginary sword and stands still.

Sound design: traditional Japanese shakuhachi flute, the ring of steel blades clashing, water splash, frogs croaking softly in the background.

 Инструкция по использованию:

- Тип: Image to Video
- Загрузки: сгенерированное изображение лягушек из промпта 1.6 → @Image1
- Ключевое: фраза "maintaining visible brush strokes throughout all motion" — заставляет модель сохранять стиль при анимации
- Опционально: загрузки аудио с японской музыкой как @Audio1 для синхронизации

FIGHTING SEQUENCE (POV — От Первого Лица)

Промпт 2.1 — Nano Banana Pro Image: POV Кулаки в Клетке

 Улучшенный промпт:

A first-person perspective shot shows two fists wrapped in worn white boxing bandages in the foreground, raised in a fighting stance. The location is a steel cage arena underground. Directly in front, close and menacing, stands a heavily muscular fighter with extensive black tattoos covering his chest, neck and arms, wearing only shorts, expression cold and arrogant. Behind the chain-link cage fence, a dense roaring crowd of spectators is illuminated by harsh industrial sodium lights hanging from a low

concrete ceiling. The atmosphere is gritty, claustrophobic and intense – underground fight club. Cinematic 16mm film grain texture. Dutch angle slightly.

 Инструкция по использованию:

- Платформа: Nano Banana Pro (генерация изображений)
- Это стартовое изображение для следующего I2V промпта 2.2
- Для точности POV-перспективы: кулаки должны занимать нижнюю часть кадра – если нет, регенерируй

Промпт 2.2 – I2V: POV Бой в Клетке

 Улучшенный промпт:

@Image1 is the POV cage fight setup. A cinematic first-person perspective fight sequence inside an underground steel cage. The opponent with tattooed chest steps forward with arrogance and says: "COME ON! Show me what you got!" Then the exchange begins – the POV character dodges a heavy right hook by slipping left, the camera tilting sharply with the evasion. Counter with a body shot – the opponent grunts and doubles slightly. He retaliates with an uppercut – the camera lurches upward on impact. Then a rapid combination drives the opponent backward into the cage fence, the chain-link rattling and bowing under his weight. He throws a desperate kick – the POV character catches his leg and delivers a final devastating right cross to his jaw. The shot goes into ultra slow-motion speed ramp at the exact moment of the finishing punch landing –

sweat and spit spray off his jaw in slow motion, his eyes roll, legs buckle. He collapses against the cage fence and slides down. The crowd erupts. Sound design: crowd roar, the thud of gloves on flesh, the clang of cage fence, grunts and breathing.

 Инструкция по использованию:

- Тип: Image to Video
- Загрузки: POV-изображение из промпта 2.1 → @Image1
- Speed ramp работает лучше всего когда момент замедления описан через конкретное физическое событие ("at the exact moment of...")
- Диалог в кавычках в начале сцены — правильная позиция для Seedance 2.0

③ OMNI FEATURE — Ты Сам В Своей Сцене

Промпт 3.1 — I2V: Бой в Киберпанк-Баре

 Улучшенный промпт:

@Image1 is the human character. @Image2 is the robotic version of the same character.

A cinematic multi-shot intense fight sequence in a neon-lit cyberpunk bar. Chaos erupts

as the fight begins – bartender ducks behind the counter, patrons scatter and run toward

exits, some hiding under tables frozen in fear. Include intense handheld camera motion

throughout. @Image1 is wearing a beige hoodie, black jeans and white Converse sneakers.

@Image2 has a sleek silver robotic body, wearing black carbon fiber pants and combat

boots. First, they exchange rapid punches – the camera cuts between close-ups of

their faces showing identical determination. Then @Image1 delivers a powerful combination that staggers @Image2. Finally @Image1 lands a decisive blow – @Image2 stumbles backward, crashes into the bar, sparks and smoke erupting from his joints, his movements becoming jerky and erratic as he malfunctions and slowly collapses to the floor, blue energy flickering out of his eyes. Sound: neon buzz, breaking glass, synth music, electrical malfunction sounds, crowd screaming.

 Инструкция по использованию:

- Тип: Image to Video (Omni)
 - Загрузи две фотографии: реальное фото себя → @Image1, AI-версию → @Image2
 - Ключевое: указывай одежду обоих персонажей детально — это якорь для идентификации
 - Платформа: Dreamina (Omni-функция)
-

Промпт 3.2 — I2V: Бой в Заброшенной Квартире

 Улучшенный промпт:

@Image1 is the human character. @Image2 is the robotic character. A cinematic multi-shot intense fight sequence in a derelict abandoned apartment – peeling wallpaper, broken windows letting in grey daylight, debris on the floor. @Image1 wears a beige hoodie, black jeans and white Converse sneakers. @Image2 has a sleek robotic body in black carbon fiber pants and boots. The fight moves through the room – they

crash through a door, smash against a wall leaving cracks.
Then @Image1 catches
@Image2 off balance and delivers a powerful side kick directly
to his torso. At
the exact moment the kick lands, a speed ramp slows to ultra
slow-motion – showing
the impact denting @Image2's chest panel, sparks erupting from
the point of impact.
Then back to full speed: @Image2 staggers, smoke pours from
his chest, sparks
cascade from his shoulder joints, his movements stutter. He
crashes to one knee,
then collapses forward onto the floor – the fight is over.
Sound: heavy breathing,
impact thuds, electrical sparks and crackling, the mechanical
whine of a robot
shutting down, dust settling.

 Инструкция по использованию:

- Тип: Image to Video (Omni)
- Speed ramp описывается фразой "at the exact moment... a speed ramp slows to ultra slow-motion" — это команда для модели
- Можно использовать как продолжение предыдущей сцены, загрузив финальный кадр клипа 3.1 как стартовый кадр

Промпт 3.3 — I2V: Кунг-Фу Дуэль под Дождём

 Улучшенный промпт:

@Image1 is the first fighter. @Image2 is the second fighter. A
cinematic multi-shot
kung fu duel at a Chinese temple during a torrential
rainstorm. Lightning illuminates
swirling storm clouds above. First, both fighters exchange
rapid strikes surrounded

by rain and mist, the camera cutting between their intense expressions. Then @Image2 performs a powerful stomping kick onto the waterlogged stone courtyard – the impact sends a circular sheet of water erupting upward around him as lightning cracks across the sky. He channels his energy with both palms forward, manipulating the water into a spinning circular wall that surrounds him, water rotating at high speed. Finally @Image2 delivers a devastating double-palm thrust into the wall of water – the entire mass launches forward like a liquid battering ram, hitting @Image1 directly and sending him flying backward through the air, crashing onto the rain-soaked stone ground, defeated. Water cascades down over his still body. Speed ramp captures the moment of impact. Sound: thunder, rain, the rush of moving water, the impact of the water wave.

 Инструкция по использованию:

- Тип: Image to Video (Omni)
- Физика воды в Seedance 2.0 обрабатывается хорошо — опиши её как реальный объект («масса воды», «стена», «батаринг рэм»)
- Молния в описании неба помогает модели автоматически генерировать правильное освещение

4 TRANSFORMATIONS (Трансформации)

Промпт 4.1 — I2V: Превращение в Волка

 Улучшенный промпт:

@Image1 is the man looking in the mirror. A cinematic medium close-up shot with handheld camera, focused on a man staring at his reflection in a bathroom mirror, eyes wide with terror and confusion. First, the veins on his neck and arms begin to bulge and darken. Then his muscles start visibly expanding, straining against his shirt fabric which begins to tear at the seams. Coarse dark hair rapidly erupts across his forearms, climbing his neck, covering his face – his facial structure shifts, jaw elongating, brow ridge thickening, ears migrating upward to the top of his skull and sharpening into points. His fingers crack and extend into clawed hands that grip the sink, cracking the porcelain. Finally he throws his head back and releases a powerful howl – the camera pulls back slightly to reveal the full wolf form reflected in the now-cracked mirror. Sound design: crackling bones, wet tearing of skin, a guttural growl escalating into a full howl, dripping water, flickering bathroom light buzzing.

 Инструкция по использованию:

- Тип: Image to Video
- Загрузи: фото мужчины → @Image1
- Описывай трансформацию *пошагово* через тело — это помогает модели соблюдать анатомическую последовательность
- Зеркало в сцене — умный приём: модель может показать обе перспективы (прямую и отражение)

Промпт 4.2 — Start & End Frame: Формирование Костюма

✓ Улучшенный промпт:

@Image1 is the start frame (woman on rooftop in normal clothes). @Image2 is the end frame (woman in full formed suit). A cinematic slow zoom-in shot focused on a woman standing at the edge of a rain-slicked rooftop at night, city lights glowing far below. White electrical energy begins pulsing from her spine outward, crackling across her skin. Then complex mechanical panels emerge from beneath her clothing – first the legs, then the torso, then arms – each segment locking into place with precise clicks and hisses of hydraulics, layered in complex interlocking mechanical structures, electricity arcing between panels during formation. The helmet assembles last – segments sweeping up from the collar and locking shut over her face. She stands fully suited in the pose matching @Image2. She slowly clenches her fist – one final electrical shockwave pulses through every panel of the suit simultaneously. An epic orchestral score swells in perfect sync with each stage of suit formation. No dialogue.

📋 Инструкция по использованию:

- Тип: Start Frame + End Frame
 - Загрузи: начальный кадр (персонаж без костюма) → @Image1, конечный кадр (в костюме) → @Image2
 - Функция Start/End Frame заставляет модель анимировать переход между двумя состояниями
 - Фраза "No dialogue" важна — без неё модель может добавить случайные звуки речи
-

Промпт 4.3 — Альтернативная Версия Формирования Костюма (Орбитальный Шот)

✓ Улучшенный промпт:

@Image1 is the character. The camera performs a rapid 360-degree orbit around @Image1 standing at the top of a tall building, wind whipping dramatically. As the camera circles, the suit rapidly forms on her body in visible mechanical layers – each pass of the camera reveals a new section of the suit snapping into place with bursts of electricity. The orbit starts at ground level then rises as the suit completes, ending on a dramatic upward-angled shot showing the fully formed suit against the night sky. The suit formation takes the full duration of the camera orbit, completing precisely as the camera reaches its final position. Sound: the whirl of mechanical assembly, electrical surging, wind, and a final resonant metallic lock-in sound at completion.

📋 Инструкция по использованию:

- Тип: Image to Video
- Используй как альтернативный вариант промпта 4.2 для другого кинематографического угла
- Орбитальный шот + трансформация — одна из наиболее зрелищных механик Seedance 2.0

Промпт 4.4 — Start & End Frame: Трансформация в Зверя

✓ Улучшенный промпт:

@Image1 is the start frame (normal man screaming). @Image2 is the end frame (full

beast transformation). A cinematic multi-shot medium close-up sequence with intense handheld camera motion focused on a man mid-scream. First, fire-like energy erupts beneath his skin, visible as a glowing network of veins pulsing orange and red. His skin begins to split at the seams – not bleeding, but tearing like a chrysalis as something larger forces its way out. His muscles bulk and double in size, shirt shredding off his body. His scream deepens, dropping multiple octaves from a human voice into a resonant beast-like roar. His spine arches violently backward, neck thickens, brow descends, eyes shift from white to burning amber. By the final frame the transformation is complete – the full enraged beast version matching @Image2 stands in his place, chest heaving, the last embers of transformation energy dissipating from his body. Sound design: a human scream morphing into a deep roar, cracking bones, tearing fabric, deep subsonic thuds on each muscle expansion.

📋 Инструкция по использованию:

- Тип: Start Frame + End Frame
 - Загрузки: стартовый кадр (человек кричит) → @Image1, конечный кадр (существо) → @Image2
 - Описание голосовой трансформации («голос снижается на несколько октав») — важная деталь для аудио-генерации
-

Промпт 4.5 – I2V: VW Жук превращается в Механического Леопарда

✅ Улучшенный промпт:

@Image1 is the yellow VW Beetle car. A cinematic front-facing shot of a yellow VW Beetle parked on a sunlit city street. A woman leans against the car smiling, then winks at the camera and says: "BETTY, do your thing girl!" She steps back. The car responds instantly – the hood splits apart revealing mechanical components beneath, the roof panels fold back and rotate outward forming shoulder blades, the doors extend into powerful mechanical forelegs, the bumper transforms into a fanged mechanical jaw, the tail section splits into haunches and a long articulated tail. The transformation unfolds in complex mechanical layers with sparks flying from each locking joint, the yellow paintwork remaining on the beast's hide in patches. The mechanical leopard rises to its full height, towering over the woman. She climbs up confidently onto its back, gripping the neck panel. The mechanical leopard opens its jaws and releases a thunderous roar directly into the camera. Sound: mechanical assembly, hydraulic hisses, metal grinding, electrical sparks, ending in the roar.

📋 Инструкция по использованию:

- Тип: Image to Video
- Загрузки: изображение жёлтого VW Beetle → @Image1

- Трансформация машины → животное — описывай *часть за частью* (капот, крыша, двери) — это даёт модели «дорожную карту» анимации
-

5 CHASE SEQUENCES (Сцены Преследования)

Промпт 5.1 — I2V: Исследователь и Мумия

✓ Улучшенный промпт:

@Image1 is the explorer character. A cinematic chaotic tracking shot with intense handheld camera motion and constant frame shake follows @Image1 sprinting through the corridors of an ancient Egyptian tomb, clutching a golden scarab artifact tightly. Behind her, a colossal mummy charges – each of its footsteps causes sections of the ancient stone wall to crack and crumble, releasing cascades of dust and debris. The mummy's wrappings trail behind it as it gains speed. @Image1 looks back frantically, breathing heavily and audibly, almost tripping over fallen debris. Cut between the mummy's grasping bandaged hand nearly closing around her shoulder and her terrified face. She rounds a corner, the mummy swipes – its arm catches an ancient stone pillar instead. The pillar fractures at its base with a grinding crack, toppling in slow motion directly onto the mummy, crushing it under tonnes of stone as clouds of ancient dust explode outward. @Image1 doesn't stop – she continues sprinting forward and plunges into the darkness of a tomb entrance ahead. Sound: pounding

footsteps, crumbling stone, heavy breathing, the thunderous crash of the collapsing pillar.

 Инструкция по использованию:

- Тип: Image to Video
 - Загрузки: изображение персонажа-исследователя → @Image1
 - «Tracking shot + handheld + camera shake» — триада для создания ощущения погони
 - Дыхание персонажа описывается как «тяжёлое и слышимое» — Seedance 2.0 добавит его в аудио
-

Промпт 5.2 — I2V: Воин Масаи и Гигантская Горилла

 Улучшенный промпт:

@Image1 is the Maasai warrior. A cinematic chaotic tracking shot with intense handheld camera motion and frame shake follows @Image1 sprinting through a burning Maasai village at night – huts blazing orange, embers swirling in the air. Then an enormous enraged silverback gorilla smashes through the wall of a burning hut in slow motion, wood and thatch exploding outward – it locks its furious red eyes on @Image1 and gives chase. The gorilla tosses other Maasai warriors out of its path like ragdolls as it thunders forward. @Image1 sprints between burning structures, spear in hand, glancing back in terror. The gorilla's massive fists slam the ground with each stride, shaking the earth. @Image1 dives through a narrow doorway into one of the burning huts – the gorilla rushes past,

disoriented by a billowing cloud of black smoke. @Image1 crouches in the shadows, pressing against the wall, peering through a crack in the burning wooden door – the gorilla's enormous silhouette moves through the smoke and fire outside, continuing its rampage. The fire crackles loudly around @Image1. His controlled breathing barely audible over the chaos outside. Sound: roaring fire, the gorilla's earth-shaking roar and footsteps, screaming villagers, crackling wood.

 Инструкция по использованию:

- Тип: Image to Video
 - Загрузи: изображение воина Масаи → @Image1
 - Контраст масштаба (крошечная щель в двери vs гигантская горилла) – описывай через физические пропорции
-

Промпт 5.3 – Nano Banana Pro Image: Пряничный Человечек

 Улучшенный промпт:

A dramatic fisheye Dutch-angle lens perspective captures a gingerbread man clutching a ripe red strawberry with both tiny hands, expression frozen in pure panic, mouth open in a silent scream. He is mid-sprint across a flour-dusted white marble kitchen counter, cookie crumbs scattered in his wake. He is very close to the camera in the foreground, filling the lower frame. In the background, slightly distorted by the

fish-eye, a furious red-faced Bakery Chef looms large, arm outstretched reaching forward. A long threatening shadow falls across the counter. Flour clouds drift in the air. Cinematic lighting with strong rim light on the gingerbread man.

 Инструкция по использованию:

- Платформа: Nano Banana Pro (генерация изображений)
- Стартовое изображение для I2V промпта 5.4
- Fish-eye + Dutch angle = готовый визуальный язык погони — используй именно этот кадр

Промпт 5.4 — I2V: Погоня Пряничного Человечка

 Улучшенный промпт:

@Image1 is the gingerbread man character. A cinematic chaotic tracking shot with intense handheld camera motion follows @Image1 sprinting across a flour-dusted kitchen counter, clutching a single red strawberry. Clouds of icing sugar and flour explode into the air as the furious Bakery Chef's hand SLAMS down trying to catch him, missing by centimetres. The Chef knocks over stacks of metal mixing bowls – they crash and clatter off the counter. @Image1 vaults over a massive rolling pin in slow motion, his tiny cookie feet crunching with each step. He struggles through a sticky mound of kneaded dough, pulling his legs free with audible squelching sounds, occasionally glancing back in terror. @Image1 says in a high-pitched

panicked voice: "WHOA! Chill dude, it's only a strawberry!"
The Chef roars
back: "GET BACK HERE!" @Image1 sprints for the counter's edge
– the Chef lunges
one final time – his hand slips on a patch of spilled butter,
skids forward and
plunges into an open jar of honey – his hand is instantly
glued to the counter.
@Image1 stops, turns back, laughs briefly – then the Chef's
other free hand
comes down HARD and flat, squashing both @Image1 and the
strawberry completely.
A beat of silence. A tiny icing-sugar cloud drifts upward.
Sound: crunchy cookie
footsteps, crashing metal bowls, slipping butter, sticky
honey, the definitive
SQUASH.

 Инструкция по использованию:

- Тип: Image to Video
- Загрузи: изображение пряничного человечка → @Image1
- Диалог написан с чёткой атрибуцией: реплика персонажа описывает *кто говорит и каким голосом* — это критично для Seedance 2.0

Промпт 5.5 — I2V: Молодой Волшебник и Монстр-Свеча

 Улучшенный промпт:

@Image1 is the young wizard character. A cinematic chaotic tracking shot with handheld camera motion follows @Image1 running through the towering shelves of an enormous dark library. Books fly off the shelves behind her as if torn by an

invisible force, crashing to the floor in cascades of paper.
The candle-head
monster pursues – each time it extends its hand toward her,
the environment
warps and buckles: shelves lean inward, stone tiles crack,
reality bends. @Image1
clutches an ancient spell book and runs while frantically
leafing through pages,
slightly out of breath. She finds the page, holds the book up
while still running
and recites in a breathless British accent: "Dramaticus
intesta." The words hang
in the air as glowing script. The candle flames on the
monster's head gutter and
sputter – one by one, each flame extinguishes with a sharp
puff of black smoke.
The monster freezes, lets out a confused gurgling sound, and
then collapses
explosively into a swirling dense cloud of black smoke, ash
and glowing orange
embers that dissipates slowly in the corridor. @Image1 slows
to a stop, looks
back, clutching the book to her chest, catching her breath.
Sound: rushing
footsteps, crashing books, the monster's wet gurgling roar,
and then sudden
silence broken only by settling ash.

 Инструкция по использованию:

- Тип: Image to Video
 - Загрузки: изображение юного волшебника → @Image1
 - Британский акцент указывается через «in a breathless British accent» — Seedance 2.0 учитывает акцент в аудиогенерации
 - Светящееся заклинание как текст в кадре — опиши его как «glowing script in the air»
-

6 EPIC POV CHASE SEQUENCES (Эпические POV Погони)

Промпт 6.1 – T2V: Погоня Змеи (POV)

✓ Улучшенный промпт:

An immersive cinematic shot from a snake's-eye-level perspective, the camera locked to the snake's head and following its fluid movement precisely. The snake glides silently through the dense undergrowth of a tropical forest floor – dappled sunlight filters through the canopy above, the ground covered in leaves and roots. The camera sways gently with the serpentine movement, tongue flicking. Suddenly, a small rodent bursts from beneath a bush and darts across the path. The camera snaps to attention – the movement speeds up as the snake gives chase, the perspective lunging forward with sudden bursts of speed, cutting through grass and over roots. The rodent zigzags desperately – then the camera surges forward in one final strike. The rodent is caught. The forest goes quiet. Sound: forest ambience, rustling leaves underfoot, the snap of the strike, then silence.

📋 Инструкция по использованию:

- Тип: Text to Video
- POV от животного – описывай камеру как «locked to the snake's head» с движением тела
- Фраза «tongue flicking» добавляет натуралистичности анимации
- Длительность: 8–10 секунд оптимально для полного нарратива

Промпт 6.2 – T2V: Паркур над Облаками

✓ Улучшенный промпт:

An immersive cinematic first-person parkour sequence above the clouds. The runner leaps across the peaked rooftops of interconnected Victorian terraced houses that somehow exist suspended high above a sea of white clouds, sunlight breaking through in dramatic golden shafts from above. The environment is surreal and breathtaking: ornate stone cathedrals with Gothic spires, gas-lit storefronts with wooden signs swaying in the wind, massive hot air balloon structures tethered to buildings, iron beams and glass walkways suspended between structures. The POV runs, leaps, catches a ledge, pulls up, rolls across a slanted roof, jumps a gap over the open sky – clouds visible far below through the gap. In the distance on other rooftops, other parkour runners are visible making their own leaps. The motion is fluid and physically grounded – the camera bobs with footsteps, lurches on landings, tilts on turns. Wind whistles constantly. Sound: footsteps on tile and stone, wind, distant city sounds from far below the clouds, the creak of a hot air balloon's ropes.

7 FROZEN IN TIME / BULLET TIME

Промпт 7.1 – T2V: Мальчик-Мастер Кунг-Фу

✓ Улучшенный промпт:

A cinematic sequence in a vast terraced rice field at golden hour. A 6-year-old Asian boy in a traditional orange kung fu outfit stands alone in the center, surrounded by a ring of twenty men holding katanas, all closing in. The boy looks up calmly, takes a deep breath – then unleashes a thunderous battle cry and stomps the ground with his right foot. The earth cracks outward from his foot in a spiderweb pattern, soil and stone fragments erupting upward. All twenty men are simultaneously launched into the air – their katanas, hats and sandals flying off in every direction. Then time freezes completely. The camera begins a slow, smooth bullet-time orbit – starting from ground level and rising in a 360-degree arc around the boy, showing all twenty men suspended mid-air with debris, soil clods and rice plant fragments frozen around them like a sculpture. The boy alone moves freely – he walks calmly through the frozen tableau, looking up at the suspended men and laughing to himself, occasionally poking

one gently. Sound fades to near silence during freeze – only a deep ambient hum and the boy's quiet giggling echoing.

 Инструкция по использованию:

- Тип: Text to Video
- Bullet time описывай через «time freezes completely» + «camera begins a slow orbit» – два отдельных действия
- Юмор в финале (мальчик толкает подвешенных людей) – добавляет характер сцене и делает её вирусной

Промпт 7.2 – T2V: Воин Минской Династии вне Времени

 Улучшенный промпт:

A bullet-time cinematic sequence on a vast Ming Dynasty battlefield at dusk. Everything in the frame is completely frozen in time – Ming Dynasty warriors mid-slash with swords, explosions with fire and debris suspended perfectly still in mid-air, smoke billowing motionless like sculpture, arrows frozen in trajectory. The only moving element is a lone wounded Ming Dynasty warrior who walks calmly through the frozen chaos, unhurried, a thin cigarette between his lips trailing a single lazy wisp of moving smoke – the only thing animated in the entire world. He is bandaged on one arm, armour battered and dusty. The camera tracks him smoothly at eye level as he wanders through the frozen tableau, looking around at the chaos with mild amusement. He approaches two warriors caught in the

moment of mutual sword-swing, faces contorted mid-scream. He leans in close to one of them, takes a long drag of the cigarette, exhales slowly – the smoke drifts naturally through the frozen scene – and says in a dry tone with a Chinese accent: "Ouch! Looks like that's going to hurt." Then he chuckles quietly, straightens up and continues walking, disappearing into the frozen smoke of battle. Sound: complete silence except for his footsteps, the faint crunch of battlefield debris, and his quiet laugh.

ACTION STORYBOARDS (Раскадровки)

Промпт 8.1 — Nano Banana Pro Image: 2x2

Раскадровка

 Улучшенный промпт:

Create a 2x2 cinematic storyboard grid in a consistent gritty fantasy art style.

Each panel is numbered 1-4 in the bottom-left corner. Panel 1: wide shot of a woman archer in a medieval village drawing a glowing green-tipped arrow, aiming

upward at something massive off-frame, thick eerie fog at ground level. Panel 2: close-up tracking shot of the glowing green arrow in flight, camera following its trajectory like a missile-cam. Panel 3: the arrow impales a colossal tree-like creature in the chest – green poison spreads rapidly outward through its bark in glowing veins. Panel 4: low-angle wide shot of the same creature beginning to melt from the base upward into thick green sludge, fog mixing with the slime. Consistent lighting (cold blue-green fog atmosphere), consistent character design across all panels.

 Инструкция по использованию:

- Это стартовое изображение для I2V промпта 8.2
- Нумерация кадров «1-4» в раскадровке позволяет в следующем промпте сослаться на порядок сцен

Промпт 8.2 – I2V: Анимация Раскадровки (Лучница vs Древесный Монстр)

 Улучшенный промпт:

@Image1 is the storyboard grid. Bring this scene to life following the sequence from panel 1 through panel 4 in order. A cinematic sequence in a medieval village shrouded in eerie thick fog. First, a woman archer in a dark hooded cloak draws a glowing green-tipped arrow, aiming upward with fierce concentration – the fog

swirls at her feet. She releases – the camera instantly locks onto the arrow and follows its flight path like a POV missile camera through the foggy air. The arrow strikes the colossal tree creature in its bark-covered chest with a wet thud. Green poison spreads rapidly outward through its body like glowing cracks of light through wood grain. Cut to a low-angle shot – the creature lets out a deep, dying groan as it begins dissolving from its roots upward into bubbling green-black sludge, its form collapsing into the fog. The atmosphere throughout is cold, eerie, and oppressive. Sound: the thwack of the arrow releasing, whistling flight, the organic thud of impact, the creature's hollow death-groan, wet dissolution sounds.

- Руки на перилах – «якорь» POV который должен быть чётко виден в нижней части кадра

Промпт 9.2 – I2V: Взрыв Уничтожает Город

 Улучшенный промпт:

@Image1 is the POV rooftop shot. Starting from @Image1 – a person stands on a rooftop railing overlooking the city. In the far distance, without warning, an enormous cataclysmic explosion erupts – a blinding white flash followed by a rising fireball that dwarfs every building in the skyline. A perfect hemispherical shockwave of compressed air tears outward at incredible speed, flattening everything

it touches – buildings shatter, glass and debris fountaining upward, entire city blocks vaporised in sequence as the wall approaches. The POV person grips the railing tighter, then releases it and turns to run – sprinting for the rooftop door, looking back over their shoulder as the shockwave wall grows to fill the entire sky. Then it hits – the camera violently shakes, the railing bends and snaps away, the building itself begins to disintegrate. The last frame: the shockwave engulfs everything in blinding white. Sound design: distant boom rolling in like thunder, escalating to an earth-shattering roar, the doppler rush of the shockwave, and then a wall of white noise silence.

 Инструкция по использованию:

- Тип: Image to Video

10 SUPER SPEED & TELEPORTATION

Промпт 10.1 – Seedream 5.0 Image: Давид vs Голиаф

 Улучшенный промпт:

A photorealistic biblical warrior – lean-built young adult male, dark brown skin, long flowing dark brown hair, wearing a simple dark blue linen tunic and brown

leather sandals, gripping a wooden staff, standing in confident defiance on a vast open battlefield under a dramatic stormy sky. Directly in front of him, looming at 10 feet tall, stands an enormous giant warrior in crude open leather and metal armor, holding a massive broadsword in one hand and a tower shield in the other, his expression contemptuous and menacing. The scale contrast between the two figures is dramatic. Cinematic wide shot, golden late-afternoon light breaking through storm clouds casting dramatic shadows. Photorealistic, epic historical drama aesthetic.

 Инструкция по использованию:

- Платформа: Seedream 5.0 (генерация изображений)
- Стартовое изображение для I2V промпта 10.2
- Контраст масштаба — описывай через конкретные пропорции («10 feet tall» vs «lean-built young adult»)

Промпт 10.2 — I2V: Телепортация в Бою

 Улучшенный промпт:

@Image1 is the battlefield illustration. A cinematic epic battle sequence.

SHOT 1 – Medium shot: the young warrior with the staff stands composed and

still, staring up at the giant without blinking. SHOT 2 – Extreme close-up:

his hand grips the staff handle – electricity begins crawling up the wood, the grain hardening and darkening to stone-like density, crackling with energy.

SHOT 3 – Extreme close-up: the giant's eyes, compound and ancient, as it opens its mouth in a world-shaking battle roar. SHOT 4 – The battle erupts: the young warrior charges forward at blinding speed, striking the giant's sword arm – the giant swings its enormous blade to grab him but hits only air. The warrior teleports – a burst of electric spark and he vanishes, reappears instantly behind the giant, strikes its back. Vanishes again. Reappears beside its knee. The teleportations are rapid, each one a flash of electricity and a displacement crack of air. The giant swings wildly, hitting nothing. Then the warrior reappears directly in the giant's path – leaping upward – and drives the electrified staff into the giant's chest with maximum force. The giant staggers, electricity arcing across its armour, and collapses backward onto the battlefield with a ground-shaking impact, raising a cloud of dust. Sound: thunder crack on each teleportation, the deep resonance of the giant's roar, the staff's electric hum, the earth-shaking final collapse.

-

DUPLICATION (Раздвоение)

Промпт 11.1 – I2V: Вампир Превращается в Летучих Мышей

 Улучшенный промпт:

@Image1 is the vampire character. A cinematic front-facing tracking shot follows @Image1 walking slowly down a dark wet alley at night, rain falling steadily, cobblestones reflecting the faint light of distant gas lamps. His long dark coat sways with each measured step. He looks directly into the camera with a sinister smirk, his pale face framed by shadows. His eyes begin to glow deep red – pupils contracting to vertical slits. He raises one hand toward the camera without breaking stride, fingers spreading. Suddenly his body dissolves – not falling but exploding outward into a swirling mass of black smoke and ash that simultaneously erupts into hundreds of bats, their wings snapping open with a thunderous rustling. The bats divide into three tight spiralling columns that fly apart in different directions – then each column descends and coalesces back into solid form, forming three identical versions of the vampire, each one stepping out of the dissipating smoke mid-stride in three different parts of the alley. All three turn to look at the camera simultaneously.

Sound: rain, the rush of hundreds of bat wings, the hiss of dissolving smoke,
three sets of footsteps on wet cobblestones.

DISINTEGRATION / SHATTERING (Распад и Разрушение)

Промпт 12.1 — I2V: Женщина Распадается в Пепел

 Улучшенный промпт:

@Image1 is the woman character. A cinematic multi-shot sequence with intense handheld camera motion begins at ground level — @Image1 is on her hands and knees, crawling desperately across a scorched city street. Multiple buildings behind her are fully engulfed in towering orange flames, thick black smoke columns rising into a blood-red sky. She screams, reaching one arm forward. Then — mid-motion — she freezes completely. Not slowing, but snapping instantly still, as if time stopped for her alone. The camera slowly orbits her frozen form. Then from the tips of her outstretched fingers, a cold grey stone texture begins spreading — creeping up her

hand, up her forearm, across her shoulder, consuming her torso – the colour bleaching from her skin and clothing as the stone takes hold. Her screaming expression is preserved perfectly in stone. Then cracks appear – hairline fractures forming across the stone surface. A single chunk breaks away from her shoulder and falls, shattering on the asphalt. Then the disintegration accelerates – her entire body crumbles in a cascade, each fragment instantly dissolving into fine grey ash and dark smoke before it hits the ground. The ash swirls upward in a slow column caught by the wind – and then disperses completely. The street is empty. The buildings still burn. Sound: crackling fire throughout, then a deep resonant STOP sound as she freezes, the slow grinding of stone forming, the sharp crack of the first fragment, then a rushing whisper as the ash blows away.

 Инструкция по использованию:

- Тип: Image to Video

- Трёхэтапная структура (заморозка → окаменение → распад) даёт модели чёткий сценарий анимации
- Звук «STOP» при заморозке – Seedance 2.0 поддерживает звуковые акценты на конкретных моментах

Промпт 12.2 – I2V: Уникальная Версия (Другой Ракурс)

 Улучшенный промпт:

@Image1 is the woman character. A cinematic multi-shot sequence with handheld camera motion opens on a high overhead shot looking down on @Image1 crawling across a burning street, the camera slowly descending toward her. Buildings on both sides are collapsing in slow motion, debris raining down. She reaches up with one arm toward the sky – and freezes. The overhead camera continues descending to her level. From above, we watch as the stone transformation spreads outward from her core in a perfect radial pattern – like frost forming on glass – first consuming her torso, then limbs, then finally her outstretched hand, fingers locking in place. Then micro-fractures spread across the entire stone surface simultaneously. A gust of wind sweeps through the burning street – and her entire stone form silently shatters and dissolves into ash, which rises up toward the camera in a swirling column. The camera pulls back slowly upward as the ash disperses, revealing just the empty burning street below. Sound: distant building collapses, flames, a resonant low tone as she freezes, the delicate crystalline sound of the stone surface fracturing, then a soft rush as the ash rises and dissolves.

 Инструкция по использованию:

- Тип: Image to Video
- Используй как альтернативный монтажный вариант к промпту 12.1 – разный угол одной сцены
- Overhead shot + descending camera – этот тип движения камеры Seedance 2.0 хорошо исполняет при явном описании

Промпт 12.3 – I2V: Женщина Превращается в Лего

✓ Улучшенный промпт:

@Image1 is the woman character. A cinematic multi-shot sequence with handheld camera motion shows @Image1 crawling across a burning city street, screaming, buildings blazing behind her. Then she freezes mid-scream – and in an instant, her entire body and clothing simultaneously pixelate and reconstruct into thousands of colourful LEGO bricks in exactly her shape – a perfect LEGO sculpture frozen in her crawling pose, complete with the blocky LEGO face locked in an expression of horror. A beat of silence. Then the LEGO figure collapses – hundreds of multicoloured plastic bricks clatter, bounce and scatter loudly across the asphalt in every direction, some bouncing off burning debris, others rolling into a nearby drain. A few lone bricks continue rolling in different directions. The fires still burn behind the now-empty street covered only in scattered LEGO bricks. The camera holds on this absurd, surreal scene – chaos of a burning city with toy bricks scattered everywhere. Sound: the instantaneous click of LEGO construction, then the tremendously loud plastic clatter of hundreds of bricks hitting

concrete simultaneously, bouncing and rolling, gradually slowing to silence.

13 MAGICAL ELEMENTAL COMPANIONS (Магические Существа)

Промпт 13.1 — T2V: Дракон из Энергии

 Улучшенный промпт:

A cinematic sequence at a mist-covered Chinese temple courtyard at dawn. An elderly Asian man in flowing white martial arts attire crouches in the centre, arms spread wide, eyes closed. He channels internal energy – the air around his hands distorts, and from his palms a glowing blue dragon of pure ethereal energy begins to form, coiling in spirals upward around his body, its serpentine form made of translucent light and plasma, scales shimmering with cold electric blue. The master opens his eyes – blazing white – and with one explosive release of his arms, he launches the dragon forward. The dragon surges directly at the camera at incredible speed, growing

larger with every frame, its mouth open in a silent roar that shakes the air, wind blasting backward from its approach. At the last moment the camera pulls back wide to capture the full scale of the dragon as it fills the sky above the temple, roaring. Stone tiles on the courtyard crack and scatter from the energy surge. Sound: low resonant hum building to a thunderous crackling energy release, the rush of the dragon's approach, the earth-shaking roar.

 Инструкция по использованию:

- Тип: Text to Video
- Не нужны изображения — детального описания достаточно для Seedance 2.0
- «Eyes blazing white» — стандартный визуальный маркер сверхъестественной силы, модель хорошо его интерпретирует
- «Silent roar that shakes the air» — указание на то, что звук передаётся через физику (вибрации), а не голосом

Промпт 13.2 — T2V: Дракон vs Огненный Волк

 Улучшенный промпт:

A cinematic wide shot at a Chinese temple at dusk, storm clouds gathering overhead. An elderly Asian man in traditional white martial arts attire crouches low on one side of the courtyard — he summons a glowing blue dragon made of coiling ethereal energy that spirals protectively around him, its scales luminescent and cold. On the opposite side, a younger martial artist in sharp black attire stands

upright and still – he raises one fist and a golden wolf made entirely of living fire materialises beside him, flame-fur rippling, ember-eyes blazing, leaving scorched marks where its paws touch the stone. The two warriors lock eyes across the courtyard. Their summons mirror their masters – the dragon coils with patient ancient power, the wolf paces with hot aggressive energy. The camera slowly pulls back in a wide arc to reveal both pairs simultaneously – the blue ethereal dragon on the left, the golden fire wolf on the right – the two warriors between them, the moment before the battle erupts. Thunder rumbles overhead. Sound: the deep harmonic hum of the dragon, the crackling roar of the fire wolf, approaching thunder, the silence between them before the fight begins.

 Инструкция по использованию:

- Тип: Text to Video
- Контрастные пары (холодный/синий vs горячий/золотой) – описывай через физические свойства, не просто цвета
- «The moment before the battle erupts» – оставляй финал открытым для продолжения через Video Extension

Промпт 13.3 – T2V: Финальная Версия с Белыми Глазами

 Улучшенный промпт:

A cinematic wide establishing shot at a Chinese temple during a brewing storm. An

elderly Asian master with long flowing white hair and completely white eyes – irises, pupils, all white like frosted glass – crouches in traditional white martial arts attire on the weathered stone courtyard. He raises both arms slowly and a vast glowing blue dragon of pure ethereal energy forms from the air itself, coiling around him in ascending spirals, its translucent body catching the lightning from the darkening sky. His white eyes glow brighter as the dragon grows in scale. Across the courtyard, his opponent – a sharply built younger warrior in fitted black attire – stands with one arm extended. A golden wolf made entirely of fire erupts from the ground beside him, muscle-definition visible in the flame, eyes like twin burning coals, tail a river of smoke. The younger warrior's expression is cold and focused. The camera performs a slow wide pull-back to reveal both masters and both summons occupying their sides of the courtyard – a perfect composition of opposing forces. Lightning forks overhead illuminating both figures dramatically. The battle is about to begin. Sound: the deep resonant hum of the dragon, the crackling intensity of the fire wolf, thunder, and the eerie silence of anticipation.

 Инструкция по использованию:

- Тип: Text to Video
- Это финальная наиболее детализированная версия — используй именно её
- Белые глаза — конкретная деталь внешности, которую нужно повторить в следующих сценах если планируется сериал

- Опционально: добавь @Audio1 с эпической оркестровой музыкой для синхронизации саундтрека
-

14 MAGIC ATTACKS FROM POV (Магические Атаки от Первого Лица)

Промпт 14.1 – Seedream 5.0 Image: Рука Мага с Синим Огнём

✓ Улучшенный промпт:

An immersive cinematic first-person perspective shot from a mage's viewpoint.
In the foreground: the mage's left hand is outstretched toward the camera
– palm up, slightly cupped – holding a hovering orb of light blue ethereal flame that casts cold blue light upward on the fingers. On the palm, a complex glowing magical insignia is visible, pulsing gently. The hand wears a dark leather bracer. In the mid-distance: a colossal rock golem creature stands motionless but watchful, its massive stone body textured with ancient lichen and cracks. In the far background: a vast winter landscape – snow-capped mountain peaks under a pale grey overcast sky, a frozen lake partially visible. The cold blue light of the flame contrasts with the grey and white of the winter environment. Cinematic first-person POV. Photorealistic. No UI elements.

 Инструкция по использованию:

 - Ключевое: синяя рука должна занимать нижний передний план — это якорь POV
-

Промпт 14.2 — I2V: Магическая Атака Молнией

 Улучшенный промпт:

@Image1 is the mage POV image. Continuing from @Image1 – a first-person perspective

with subtle handheld camera motion. The mage's outstretched hand reaches forward and closes around the floating blue flame, crushing it in a tight fist. The flame doesn't extinguish – it reacts: the hand begins to transform. Stone texture creeps up the fingers from the knuckles, the skin hardening into grey volcanic rock, cracks forming between the stone plates that glow electric blue from within. The transformation crawls up the wrist and forearm – now fully a rock-covered electrified fist. The mage turns the fist over, opens the palm flat – electricity arcs between the stone fingers in dense crackling bolts. The golem in the distance begins slowly walking forward, its stone feet cracking the frozen ground with each step. The mage's palm snaps into a tight fist – and three massive bolts of electricity launch from the fist simultaneously, streaking across the winter landscape directly into the golem's chest. The impact is catastrophic – the electricity spreads across every

surface of the golem's body in blue-white arcs, the stone body vibrating at high frequency. Then the golem's torso shatters outward – massive stone chunks blasting outward in all directions, the creature destroyed. Dust and snow settle. Sound: the stone transformation grinding, electricity crackling intensely, the launch of the bolts like a thunderclap, the golem's stone shattering.

 Инструкция по использованию:

- Тип: Image to Video

- «Snap fist → bolts launch» – прямая причинно-следственная связь помогает модели синхронизировать движение и эффект

LARGE SCALE BATTLES (Масштабные Сражения)

Промпт 15.1 – T2V: Нежить Рима vs Инопланетный Город

 Улучшенный промпт:

SHOT 1 – EWS, DRONE, WIDE, STATIC: A cinematic aerial drone shot holds above a desolate dust-choked alien plain under twin purple moons and a violet sky. A massive column of undead Roman legionaries marches relentlessly – their bronze armour rusted and pitted, exposed bones glowing with faint blue necromantic energy,

dead eyes forward. At the column's vanguard, five colossal skeletal war elephants draped in tattered black banners and crumbling howdahs filled with skeletal archers lead the advance toward a gleaming alien city of crystalline geometric towers in the distance.

SHOT 2 – LOW ANGLE WIDE, GROUND LEVEL: The ground shakes violently. The massive rotting feet of the lead undead elephant stomp into frame, each impact cracking the alien crystalline flora beneath – strange purple plants shattering like glass. The elephant's hollow eye sockets blaze cold blue. Its tusk is a jagged spear of ancient yellowed bone.

SHOT 3 – CU, EYE LEVEL: Cut to a close-up of an Alien Commander's compound eyes – multifaceted, insectoid, each lens reflecting a tiny image of the approaching horror. Its expression is cold calculated logic fighting primal fear. A four-fingered hand rises slowly, its palm building a charge of green plasma energy, silently signalling the order to fire.

SHOT 4 – SMASH CUT, TRACKING, GROUND LEVEL, SPEED RAMP TO SLOW MOTION: The shot drops to ground level as the first volley of green plasma bolts screams across the battlefield. Time ramps to slow motion – a massive bolt strikes the lead undead elephant squarely in the ribcage, blasting apart bone and rotted muscle in a shower of blue necromantic dust and sparks. The beast stumbles but does not fall,

skeletal trunk thrashing. The skeletal soldiers on its back simultaneously hurl ancient rusted pila – the javelins arc in slow motion, sparking against the alien force field barriers in bursts of green and blue energy.

SHOT 5 – EWS, DRONE ASCENDING: The drone rises steadily above the full scale of the melee below – the neat alien defensive lines have collapsed into a churning swirling brawl of green plasma fire and blue necromantic energy. The undead elephants function as living siege engines, smashing through crystalline structures with their bone-plated skulls. The relentless tide of skeletal legionaries pours over metallic barricades in waves, overwhelming defenders with sheer ancient ferocity. The alien city begins to burn with cold green fire.

Sound design: the thunderous march of ten thousand undead, the elephant's hollow bone-trumpet roar, the shriek of plasma bolts, steel and bone clashing, alien screaming – the soundtrack of impossible war.

 Инструкция по использованию:

- Тип: Text to Video
- Нумерованные шоты – наиболее эффективная структура для масштабных батальных сцен в Seedance 2.0
- Каждый шот начинай с технического описания камеры (EWS/DRONE/CU) – модель интерпретирует эти термины
- Длительность: максимальные 15 секунд – для охвата всех 5 шотов

Промпт 15.2 – T2V: Гориллы vs Куры

 Улучшенный промпт:

A cinematic epic wide establishing shot of a jungle clearing split by a river of dark mud at dawn, thick tropical mist. Left bank: ten thousand silverback gorillas in tight disciplined ranks, knuckles pressed to the earth, chests pounding in rolling thunder that shakes the trees – their eyes furious and focused. Right bank: a feathered horizon of chickens packed shoulder to shoulder in an impenetrable mass, beaks forward, eyes gleaming with inexplicable determination. A single coconut falls from a tree and splashes into the mud between them – a beat of silence – then both sides simultaneously charge across the river and the battle erupts. Cut to multi-shot chaos: wide shots of the two armies colliding in explosions of feathers and mud, silverbacks swinging enormous arms, the chickens surging forward in overwhelming numbers – for every gorilla that clears space, twenty more chickens close in. Cut to close-ups: individual chickens pecking with terrifying coordinated precision at gorilla knees. Speed ramp to slow motion: the turning point – a gorilla alpha raises its fists but is buried under a cascade of chickens piling on from all directions. Finally a wide drone shot pulls back to reveal the jungle clearing – every gorilla is down, covered in chickens standing triumphantly on their chests. The chickens cluck. Sound: the thunderous battle cry of ten thousand

gorillas, the collective clucking of the chicken army, the chaos of feathers and mud, triumphant chicken clucking at the end.

 Инструкция по использованию (15.2):

- Тип: Text to Video
 - Абсурдный концепт (куры vs гориллы) работает именно потому что описан с полной серьёзностью — Seedance 2.0 воспримет физику так же серьёзно
 - «The chickens cluck triumphantly» — юморная звуковая деталь в конце, делает видео вирусным
 - Длительность: 15 секунд — максимум для охвата arc «нагнетание → битва → победа»
-

Промпт 15.3 — T2V: Ацтеки vs Викинги в Джунглях

 Улучшенный промпт:

An epic cinematic large-scale battle between Aztec warriors and Viking raiders set in a dense tropical jungle. Every warrior in the battle looks visually distinct – unique facial markings, individual weapons, different armour configurations and body types. SHOT 1: An extra-wide aerial drone establishing shot holds above the jungle canopy – two armies charge toward each other through the undergrowth from opposite sides, the moment before first contact. Then the camera DIVES straight down into the heart of the collision. SHOT 2: Ground-level chaos – an Aztec warrior in jade mosaic armour wielding an obsidian-bladed macuahuitl clashes with a massive axe-wielding Viking, sparks flying. Whip pan

LEFT to show two Vikings being outmaneuvered by three Aztec jaguar warriors moving with cat-like precision. SHOT 3: Speed ramp to slow motion – an Aztec eagle warrior launches himself through the air, feathered wings spread, crashing into a Viking shield wall, the shields splintering on impact. Full speed resumes. SHOT 4: Whip pan UP to a Viking berserker – face painted, eyes wild – swinging a double axe in a circle, screaming a battle cry, surrounded by warriors trying to bring him down. SHOT 5: Wide pull-back through the trees showing the full scale of battle – hundreds engaged across multiple planes of depth into the jungle, smoke and dust rising through the canopy. Sound design: tribal drums vs Norse battle horns, clash of obsidian and steel, war cries in two languages, the dense ambience of a tropical jungle battlefield.

 Инструкция по использованию:

- Тип: Text to Video
- Требование «each character looks unique» выполнено через детальное описание снаряжения — не просто команда, а конкретные детали для каждого
- Whip pan описывается как «WHIP PAN LEFT/RIGHT/UP» — Seedance 2.0 распознаёт эти кинематографические термины
- Для ещё большей уникальности персонажей — загрузи референсные изображения ацтекского и викингского снаряжения через @Image1 и @Image2

Промпт 15.4 — T2V: Гигантская Битва в Гонконге (Кайдзю)

 Улучшенный промпт:

A cinematic kaiju-scale battle erupts over a bustling neon-lit Hong Kong at night.

SHOT 1: A wide aerial shot shows two colossal giants – at least 50 storeys tall – fighting above the dense city grid, their bodies towering over skyscrapers. On the left: a Japanese schoolgirl giant in a white uniform, black hair wild in the storm she creates with each swing. On the right: a retro 1970s-themed robot giant – boxy chrome body, flashing disco-era LED panels, antenna head – throwing wide mechanical punches. SHOT 2: Ground-level chaos – tiny cars swerve and crash as giant feet obliterate entire city blocks, a shockwave from a punch sending a wave of shattered glass and debris across six lanes of traffic. Crowds of panicked people run screaming in every direction. SHOT 3: The schoolgirl catches the robot's punch mid-swing, grips its mechanical arm and uses its own momentum to hurl it into a cluster of skyscrapers – the towers buckle and collapse in a cascade of glass and steel. SHOT 4: Street level – a group of people stop running to stare upward, faces lit by the orange glow of fires. One person points. SHOT 5: Wide shot – the schoolgirl delivers a definitive roundhouse kick to the robot's head, the antenna snapping off and spinning away into the harbour. The robot staggers, its LED panels flickering out one by one, and crashes into the harbour, sending a massive wave crashing across the waterfront. The schoolgirl stands over the

city, chest heaving. Sound: city screaming below, the colossal impact of giant bodies, crumbling buildings, the robot's mechanical whir cutting to silence.

 Инструкция по использованию:

- Тип: Text to Video
- Scale (50 storeys) — указывай конкретные числа, не «очень большой» — модель лучше калибрует пропорции
- Реакция толпы на земле (SHOT 4) — обязательный элемент кайдзю-сцен, создаёт масштаб через контраст

16 BECOME A SUPERHERO — FLY THROUGH THE SKY

Промпт 16.1 — Nano Banana Pro Image: Персонаж на Небоскрёбе

 Улучшенный промпт:

A medium front-facing cinematic shot shows a young Black male sitting right at the edge of a skyscraper rooftop at dusk, legs dangling freely off the side into open air. He wears a red bomber jacket over a black hoodie, black jeans and white Converse sneakers. His hands rest loosely on the ledge beside him. He looks straight down with calm curiosity, not fear. The city stretches far below — golden hour light making the buildings glow orange and amber. His face is partially lit from below by the city lights. Wind subtly moves his hoodie. Cinematic portrait composition. Photorealistic.

 Инструкция по использованию:

- Платформа: Nano Banana Pro (генерация изображений)
 - Стартовое изображение для I2V промпта 16.2
 - Критично: ноги должны свисать — если модель генерирует сидящего иначе, регенерируй с уточнением «legs hanging off the edge, feet in the air»
-

Промпт 16.2 — I2V: Полёт Супергероя

 Улучшенный промпт:

@Image1 is the man sitting on the skyscraper ledge. A cinematic medium front-facing shot begins on @Image1 as he sits at the edge of the rooftop looking down. Then his eyes slowly lift – they begin to glow white, building in intensity. Electricity begins crawling across his skin – first his hands, then up his arms, neck, across his face, his red jacket crackling with arcing blue-white current. He takes a slow breath. Then he pushes off the ledge and drops – for one beat he falls – and then he LAUNCHES upward and forward, rocketing into the city skyline. The camera cuts to a tracking shot following him from behind as he accelerates through the canyon of skyscrapers at incredible speed – the buildings blurring at the periphery, his electricity trail blazing behind him like a comet. He tilts into a wide banking turn, carving through the city lights, the trail of electricity scribing arcs through the neon-lit night sky. He looks over his shoulder at the camera with a wide grin – completely free. The camera pulls back to show the full city below

with his electric trail weaving between the towers. Sound: the building hum of electricity, the sonic crack of launch, the rush of wind at speed, the city below – distant horns and ambience – and his laughing freely.

 Инструкция по использованию:

- Тип: Image to Video
- Загрузи: изображение из промпта 16.1 → @Image1
- «Drops for one beat and then LAUNCHES» – пауза перед взлётом создаёт драматический момент и помогает модели строить нарастание напряжения
- «Electricity trail scribing arcs» – описывай след как физический объект, оставляющий следы в пространстве

EPIC POV BODYCAM SHOOTOUTS

Промпт 17.1 – T2V: БОРЫ в Фавеле

 Улучшенный промпт:

A visceral first-person bodycam POV shot follows a BOPE tactical officer infiltrating a dark narrow alley deep inside a Brazilian favela at night. The tactical flashlight mounted on his assault rifle is the primary light source – its beam cutting through darkness and revealing graffiti-covered brick walls, hanging laundry, exposed pipes. He moves forward in a tactical crouch, breathing controlled. Then a smoke grenade explodes at the alley entrance ahead – thick white smoke fills the corridor. Suddenly

– muzzle flashes from within the smoke. The officer reacts instantly, sprinting laterally to the right wall, pressing his back against it, chest heaving. He ejects a spent magazine – it clatters on the concrete – and reloads with practiced speed. A masked gunman in a football jersey and rubber sandals bursts out of the smoke, fires a burst directly at camera and sprints away down a side alley. The shots hit the officer – the bodycam lurches violently, body impacts the ground hard. The camera settles at ground level, slightly tilted, the officer's laboured breathing audible and wet. The battle continues off-screen – muzzle flashes visible through the smoke, shouting in Portuguese, more shots, the distant sound of boots running. The bodycam continues recording, unmoving, as the chaos plays out. Sound design: tactical breathing, the crack of gunfire, the clatter of a falling magazine, impacts, Portuguese shouting, radio static, distant sirens.

 Инструкция по использованию:

- Тип: Text to Video
- Tactic flashlight as the only source of light — Seedance 2.0 хорошо воспроизводит динамику светового луча от оружия
- «Camera settles at ground level, slightly tilted» — описывай финальное положение упавшей камеры как физический объект
- Диалог на португальском языке («shouting in Portuguese») — модель учитывает языковое указание в аудиогенерации

18 POV VEHICLE / AIRCRAFT (POV Транспорт)

Промпт 18.1 — I2V: Гоночный Автомобиль в Токио

✓ Улучшенный промпт:

@Image1 is the interior racing car cockpit. A cinematic POV shot from inside the racing car cockpit – @Image1. The driver's gloved hands grip the steering wheel, knuckles visible through the leather, occasionally making micro-corrections. Every few seconds the hand drops to the gear shifter – executing a precise upshift – the hand returns to the wheel. The speedometer needle climbs and swings responsively to each gear change and cornering load. The car is on a winding mountain road descending toward a glittering Tokyo city sprawl visible in the valley below. The headlights blast the tarmac ahead – the driver enters a sharp corner and initiates a drift – the rear breaks loose, white tyre smoke billows past both windows, the wheel turns hard into the slide, corrects, and the car power-exits the corner. The horizon tilts dynamically with the car's attitude. Environmental elements at speed are rendered in motion blur at the frame edges. The city lights grow closer with each section. Intense rhythmic camera shake throughout. Sound: high-revving engine, gear shift mechanical clunk, screaming tyres on asphalt, the whoosh of night air, distant Tokyo city ambience building as the car descends.

📋 Инструкция по использованию:

- Тип: Image to Video

- Загрузи: фото или изображение кокпита гоночного автомобиля → @Image1
 - Спидометр как «динамически реагирующий объект» — важная деталь для Seedance 2.0, модель анимирует его в соответствии с описанной скоростью
-

Промпт 18.2 — I2V: Ралли-Автомобиль на Вулкане

✓ Улучшенный промпт:

@Image1 is the rally car cockpit interior. A cinematic POV shot from inside the rally car – @Image1. The driver's gloved hands grip the rally steering wheel with intense pressure as the car navigates a rocky volcanic track at speed. Through the windscreen: barren obsidian rock scarred by ancient lava flows, plumes of white sulphuric steam venting from cracks in the earth on either side of the track. In the far distance, the volcanic cone of the active volcano glows orange at its crater. The headlights illuminate the rough rocky surface as the car jolts over uneven terrain. The driver's breathing is heavy and controlled – audible through the helmet. Then – the distant volcano erupts: a colossal column of fire and ash launches skyward, visible through the windscreen. Three seconds later the shockwave hits – the entire cockpit shakes violently and repeatedly, loose coins in the cupholder rattle, the rear view mirror vibrates blurred, the dashboard warning lights flicker. A wave of glowing embers rains down across the windscreen.

The driver grips tighter and accelerates. Sound: engine roar, gravel pinging the undercarriage, volcanic venting steam, then the deep boom of the eruption rolling in, the violent shockwave shake, embers hissing on the windscreen glass.

 Инструкция по использованию:

- Тип: Image to Video
 - Загрузки: изображение ралли-кокпита → @Image1
 - Детали дрожания (монеты в подстаканнике, зеркало в вибрации) — микродетали, которые Seedance 2.0 использует для создания cinematic реализма
 - «Three seconds later» — временная пауза между событиями, описанная явно, помогает модели соблюдать физику скорости звука
-

Промпт 18.3 — Nano Banana Pro Image: Вертолёт и осьминог

 Улучшенный промпт:

An immersive cinematic first-person POV shot from inside a helicopter cockpit. Every component is meticulously detailed – cyclic control stick gripped in the right hand, collective lever to the left, rudder pedals at the feet, the full instrument cluster of dials, gauges and digital readouts visible across the dashboard. Through the wide cockpit windscreen ahead: a towering colossal octopus sea monster has breached from the ocean, its body the size of a

skyscraper, skin glistening dark purple-black and wet.
Multiple enormous
tentacles are actively wrapped around a massive cargo ship
nearby, the ship
listing at 45 degrees, containers sliding off the deck into
churning waves.
One tentacle rises and swings directly toward the helicopter's
POV. Storm-dark
sky, sea spray against the cockpit glass. The pilot's hand on
the cyclic shows
white-knuckle tension. Cinematic, photorealistic, first-person
perspective.

 Инструкция по использованию:

- Платформа: Nano Banana Pro (генерация изображений)
- Стартовое изображение для I2V промпта 18.4
- Детализация приборной панели критична — чем точнее описан кокпит, тем реалистичнее стартовый кадр

Промпт 18.4 — I2V: Вертолёт Тонет в Океане

 Улучшенный промпт:

@Image1 is the helicopter cockpit POV. Continuing from @Image1
– a cinematic
first-person perspective from inside the helicopter cockpit
during a terrifying
storm at sea. The cockpit shakes violently from the turbulence
– rain lashes
the windscreen so heavily visibility is minimal. Through the
glass: in the
distance the colossal octopus is destroying a cargo ship, its
tentacles tearing
metal like paper. Then one enormous tentacle breaks the
surface near the

helicopter – the pilot banks hard to evade – but the tentacle arcs upward and CRASHES through the cockpit side window, glass exploding inward. The cockpit tilts violently – everything goes sideways, then inverted. A pilot's voice off camera screams: "Oh dear God! Help us!" The helicopter spins downward. The ocean surface rushes up – fills the windscreen – and then the impact: the cockpit plunges underwater. The violent surface entry gives way to the sudden muffled silence of underwater – bubbles rushing past the windscreen, the helicopter sinking, the storm visible as a blurred distortion far above the surface. Emergency lights flicker red inside the cockpit. The octopus's tentacles are visible as massive dark shapes passing slowly outside. Sound: the storm and rotors cut abruptly to the dense muffled silence of underwater, bubbles, the creaking of the cockpit under pressure, the pilot's last gasped words reverberating.

 Инструкция по использованию:

- Тип: Image to Video
- Загрузки: изображение из промпта 18.3 → @Image1
- Переход «воздух→вода» описан через физику (звук глушится, пузыри, рефракция поверхности) — Seedance 2.0 воспроизводит этот переход хорошо при детальном описании
- Реплика пилота в кавычках помещена ровно перед моментом погружения — правильная позиция для диалога

19 HORROR SEQUENCES FROM POV (Хоррор от Первого Лица)

Промпт 19.1 – I2V: Водолаз и Электрический Угорь

✓ Улучшенный промпт:

@Image1 is the underwater coral reef POV shot. A cinematic immersive POV shot from a scuba diver's perspective – the rhythmic sound of the regulator is the only audio. The diver glides through a stunning shallow coral reef – fish darting between coral formations, shafts of sunlight filtering down from above, visibility excellent and serene. Then – without warning – a massive electric eel erupts from a crevice in the reef wall directly ahead, its body at least 4 metres long, crackling with visible bioluminescent blue electrical discharge along its entire length. It surges past the diver at high speed – the electrical field causing the diver's dive computer to spark and the camera to distort with electromagnetic interference for a moment. The diver recoils backward – the POV camera lurches, mask tilting, bubbles exploding from the regulator as the diver gasps in shock. Then full panic – the diver kicks hard, pulling away in the opposite direction, the camera shaking with frantic kicking. The eel disappears into the dark blue deep. The diver keeps swimming away fast, occasionally looking back over the shoulder. Sound: peaceful regulator

breathing, then the electric crackle of the eel passing,
electromagnetic
static burst, the sharp exhale of shock through the regulator,
then rapid
panicked breathing fading as the diver swims away.

 Инструкция по использованию:

- Тип: Image to Video
 - Загрузи: изображение коралловых рифов с дайверской перспективой → @Image1
 - Электромагнитный эффект на камеру («distort with interference») — креативный способ передать близость опасности без direct contact
-

Промпт 19.2 — Nano Banana Pro Image: Факел в Сарае

 Улучшенный промпт:

A first-person perspective POV shot – a hand extends into the frame from below
gripping a lit wooden torch, its flame casting warm flickering orange light
forward into a dark, rustic medieval barn. The light reveals a large central
hay bale, rough-hewn timber walls dark with age, straw-covered dirt floor.
Farming tools – a pitchfork, scythe, coils of thick rope –
hang on the walls
and cast long dramatic moving shadows from the torch flame.
Sacks of grain
stacked in a corner. A heavy wooden beam overhead disappears into darkness.
The barn feels large, ancient and oppressive. Beyond the immediate torch-lit
area, complete darkness. The shadows shift as if the torch is being held by

someone who is breathing – subtle micro-movement. Atmospheric, eerie, photorealistic. No people visible.

 Инструкция по использованию (19.2):

- Платформа: Nano Banana Pro (генерация изображений)
 - Стартовое изображение для I2V промпта 19.3
 - «Shadows shift as if someone is breathing» – эта деталь создаёт живость в статичном изображении и задаёт тон для анимации
 - Убедись что факел и рука занимают нижний передний план – это якорь POV перспективы
-

Промпт 19.3 – I2V: Средневековый Крестьянин и Нашествие Крыс

 Улучшенный промпт:

@Image1 is the dark barn interior with the torch. A cinematic immersive shot from a first-person perspective – a medieval villager walks slowly into the dark barn of @Image1, holding a flaming torch at arm's length. His breathing is slow and heavy, fog visible with each exhale in the cold air. The torch casts shifting orange shadows across the rough walls. He approaches the central haystack step by careful step. He leans the torch forward to illuminate it – and then he sees them: first one pair of red eyes in the straw, then ten, then hundreds – the entire haystack is seething. Then they pour out. Thousands of

rats surge from every direction simultaneously – from the hay, from holes in the walls, from beneath the floor planks, from the rafters above. A living black carpet of writhing bodies and naked tails floods toward the camera at terrifying speed. The villager swings the torch in wide desperate arcs – rats scatter from the flame but immediately close back in from the sides. The torch catches a rat – it shrieks and retreats but three more take its place. The wave of bodies reaches the boots – the POV camera lurches backward, staggers, then falls hard. The torch hits the ground and rolls, its flame still burning sideways, illuminating a ground-level view of thousands of tiny clawed feet streaming past. Rats begin climbing over the fallen body – the camera tilts further as they cover the lens. The last image: a close-up of a single rat face filling the frame, whiskers twitching, before darkness. Sound: the initial silence of the barn, the first faint scrabbling – then a rising tide of thousands of claws on wood and straw, the villager's escalating grunts of panic, the whoosh of the torch swinging, rats squealing, the heavy fall, and finally the overwhelming chittering blanket of sound as they overwhelm him.

 Инструкция по использованию:

- Тип: Image to Video
- Загрузки: изображение сарая с факелом из промпта 19.2 → @Image1
- Нарастание ужаса строится через три фазы: тишина → первые признаки → полное нашествие — описывай каждую фазу явно

- «Single rat face filling the frame» — финальный close-up как последний кадр создаёт максимальный horror-эффект
 - Звук нарастания — Seedance 2.0 генерирует аудио параллельно с видео, поэтому «rising tide of sound» является прямой аудиоинструкцией
-

20 SUPERHERO INTRODUCTION VIDEO (Эпичное Представление Супергероев)

Промпт 20.1 — I2V: Четыре Супергероя на Горе

✓ Улучшенный промпт:

@Image1 is the four superheroes lineup image. A cinematic multi-shot superhero introduction sequence. @Image1 establishes the base composition: four superheroes standing in a dramatic line on the peak of a rocky mountain ridge, storm clouds and city lights visible in the deep background far below.

SHOT 1 – WIDE ESTABLISHING: A slow cinematic pan moves left to right across all four heroes simultaneously in their iconic poses, an epic orchestral theme building. The camera holds wide enough to show all four.

SHOT 2 – HERO ONE (far left): Speed ramp to slow motion – he stomps one foot down onto the rocky surface. The rock beneath his boot instantly FREEZES – ice crystals race outward in a burst pattern from the impact point, shattering upward into sharp frozen shards that launch into the air around him. Soil and

gravel fragments orbit the freeze zone. Cut to close-up of his cold determined face. His breath fogs in the sudden chill.

SHOT 3 – HERO TWO (second from left): Speed ramp – close-up of his cat companion, eyes glowing golden. Cut to his outstretched palm – a rotating glowing emblem spins slowly above it, geometric and luminous, casting light patterns across his face. The cat and the emblem glow in perfect synchrony.

SHOT 4 – HERO THREE (second from right): A cybernetic woman swings an electrified baseball bat in a wide arc – speed ramp catches the bat mid-swing at the peak, electricity arcing off the tip in branching bolts, the metal glinting. She grins through the sparks. Full speed resume – the swing completes with a crack of displaced air.

SHOT 5 – HERO FOUR (far right): A Muay Thai fighter launches a flaming knee strike – his entire leg from the knee down ignites with deep orange-red fire as the knee connects with imaginary air, a shockwave of flame expanding outward from the impact. He follows with a spinning back kick – fire trailing behind his heel in a perfect arc.

SHOT 6 – FINAL WIDE: The camera rapidly pulls back and rises to reveal all four heroes simultaneously in their peak power poses – ice shards still orbiting Hero One, the emblem still spinning above Hero Two's palm, sparks still dancing from Hero Three's

bat, fire still trailing from Hero Four's stance. The storm clouds behind them churn dramatically. The orchestral score hits its climax. Hold on this image for two beats. Then hard cut to black.

Sound design: each hero's power activation has a distinct audio signature – the crystalline crack of ice, the harmonic hum of the emblem, the electric crack of the bat, the deep whomp of igniting flame – all layered under a building epic orchestral score that peaks on the final wide shot.

Инструкция по использованию:

- Тип: Image to Video
- Загрузки: изображение всех четырёх супергероев в линейке → @Image1
- Если у тебя есть отдельные изображения каждого героя — загрузки их как @Image2, @Image3, @Image4, @Image5 и укажи каждого по имени в промпте для максимальной точности
- Нумерованные SHOT-ы критичны — без них Seedance 2.0 может смешать порядок героев
- «Hard cut to black» в финале — явная инструкция для финального кадра, которую модель исполняет
- Длительность: 15 секунд максимум — планируй не более 2–3 секунд на каждый из 6 шотов

ИТОГОВАЯ ШПАРГАЛКА — УНИВЕРСАЛЬНЫЕ ПРАВИЛА ДЛЯ ВСЕХ ПРОМПТОВ

На основе анализа официального документа Seedance 2.0 — сводная таблица ключевых принципов:

Структура идеального промпта

Элемент	Правильно 	Неправильно 
Тип движения	«handheld camera with slight sway»	«cinematic camera» без деталей
Персонаж	«elderly Asian man in white silk robes»	«old man in white clothes»
Последовательность	«First... Then... Finally...»	Один длинный непрерывный абзац
Звук	«Sound: cracking ice, bass hum, crowd roar»	Без звуковых инструкций
Физика	«shards orbit the freeze zone»	«ice appears»
Диалог	В кавычках + «says in a British accent:»	Без атрибуции и акцента
Speed ramp	«at the exact moment of impact, slow to ultra slow-motion»	«slow motion» без триггера
Финал	«Hard cut to black» / «camera holds on...»	Открытый финал без инструкции

Типы промптов и когда использовать

- Text to Video — для сцен где персонажи создаются с нуля, без референсных изображений

- Image to Video — когда есть стартовое изображение персонажа или локации; всегда добавляй @Image1
 - Start Frame + End Frame — для трансформаций где начальное и конечное состояние известны; загружай оба кадра
 - Omni (Dreamina) — для помещения реального человека в сцену; требует 2 фото и @Image1 / @Image2
-

Топ-5 усилителей качества результата

1. Аудио в каждом промпте — Seedance 2.0 генерирует звук синхронно с видео; детальные звуковые инструкции напрямую влияют на качество
2. Физические причинно-следственные связи — «he slams the ground → cracks radiate outward → men fly upward» — не просто «он ударил и все полетели»
3. @-референсы для ассетов — загружай изображения персонажей, стилей, движений камеры и аудио как отдельные ассеты
4. Нумерованные шоты для сложных сцен — SHOT 1 / SHOT 2 / SHOT 3 обеспечивают многошотовый контроль
5. Конкретные кинематографические термины — «EWS drone ascending», «CU eye level», «whip pan», «speed ramp», «tracking shot» — модель их распознаёт и исполняет
