

ПОЛНАЯ ОПЕРАТИВНАЯ РЕКОНСТРУКЦИЯ ASMR

План действий в хронологическом порядке:

1. Откройте YouTube и выберите справочное видео из той же области (реалистичная ASMR-реставрация от первого лица с мультяшным персонажем).
2. Посмотрите его один раз для “большой истории” и один раз, чтобы обратить внимание на структуру (Поиск → Транспортировка → Мойка → Ремонт → Покраска/ полировка → Демонстрация).
3. Напишите свой полный план действий на YouTube: разбейте историю на сцены, а затем на короткие кадры (широкий / средний / крупный план), указав примерный хронометраж для каждой из них.
4. Откройте Google AI Studio и сгенерируйте подсказки к сценарию, которые вы будете использовать для каждой сцены / кадра (что происходит, поведение камеры POV, окружение, настроение, заметки о реализме).
5. Не выходя из Google AI Studio, уточняйте подсказки, пока они не станут согласованными (то же описание персонажа, то же описание местоположения, тот же язык, на котором работает камера).
6. Сохраните многоразовый шаблон “базовой подсказки” (персонаж + реалистичность + POV + объектив + освещение) и копируйте его для каждого снимка.
7. Откройте Google Flow и создайте ключевые изображения для временной шкалы (по одному изображению на каждый кадр или, по крайней мере, ключевые кадры начала и конца для каждого кадра).
8. Сохраняйте целостность персонажа, каждый раз используя одно и то же основное описание (те же цвета, лицо, материалы, повреждения, уровень загрязнения).
9. Создавайте дополнительные детализированные изображения крупным планом (ржавчина, мох, грязь, болты, облупившаяся краска) для использования в качестве вырезок и увеличения продолжительности съемки.

В Google Flow преобразуйте ключевые изображения в анимацию (изображение → видео).

10.Для каждого снимка выбирайте простые, контролируемые движения: медленное вдавливание, медленный поворот, движение рукой, движение воды / пены, взаимодействие с инструментом.

11.Если снимок смещается (меняется выражение лица, пропорции), повторите этот снимок с более жесткими подсказками и более короткими движениями.

12.Экспортируйте все анимированные клипы из Google Flow с одинаковыми настройками (одинаковое разрешение/частота кадров в секунду).

13.Монтируйте клипы в своем редакторе в точном порядке, как указано в вашем плане действий на YouTube.

14.Исправьте расстановку кадров: более длинные кадры для стирки / ASMR, более короткие - для транспортировки и показа.

15.Добавьте звук: лесная атмосфера + шаги + ветки (найдите сцену), затем цепь/ металл (транспортировка), затем вода/пена/щетка (мытьё), затем инструменты / щелчки металла (ремонт), затем спрей/ полироль (отделка).

16.Микширование звука для ASMR: уменьшайте фоновый шум, подчеркивайте близкие звуки, поддерживайте постоянный уровень на протяжении всего видео.

17.Выполните окончательную доработку: слегка подкорректируйте цвет для реалистичности, тонкой зернистости, при необходимости слегка размажьте изображение при движении, стабилизируйте, если какой-либо клип кажется “плавающим”.

18.Экспортируйте готовое видео в удобных для YouTube настройках и загрузите.

19.Напишите название / описание / хэштеги, соответствующие тематике, и при необходимости прикрепите комментарий.

Запросы на получение изображений

POV first-person perspective, hyper-realistic cinematic shot. The camera moves forward, walking through a dense, overgrown forest. Two hands wearing worn, dirty leather work gloves enter the frame to push aside thick green vines and heavy tropical bushes. Sunlight filters through the tree canopy creating soft light rays and lens flares. High-contrast lighting, forest floor shadows, atmospheric dust particles. Handheld camera movement with slight natural shake, 4k, extreme detail, highly realistic textures. --ar 16:9

He's standing right in the bushes, you can see Thomas the Tank Engine, but it's not very clear.

POV first-person perspective, standing in a jungle clearing in front of a massive, life-sized Thomas the Tank Engine locomotive. Thomas is enormous, towering over the camera, positioned on the left side of the frame and facing toward the left. Two dirty, worn yellow leather-gloved hands reach into the frame; the hands appear small against the giant scale of the train. One hand reaches out to touch the cold, rusted blue iron of the boiler, while the other wipes thick moss away from the train's huge, cracked face. The locomotive is heavily derelict with flaking blue paint, deep rust, and thick vines wrapping around its massive frame. Cinematic high-contrast lighting, dappled sunlight, heavy lens flares, atmospheric forest dust. Hyper-realistic textures, 8k resolution, extreme detail, epic scale. --ar 16:9

POV first-person perspective, looking down from a high angle directly into the dark, massive, rusted chimney funnel of a life-sized Thomas the Tank Engine. Two dirty, worn yellow leather-gloved hands are visible, gripping the jagged, soot-stained metal rim of the funnel. Thick, billowing dark gray smoke rises from the hole, curling around the gloves. Inside the funnel, the metal is warped, cracked, and clogged with layers of old ash and rust. The surface of the locomotive's boiler below is covered in deep flakes of rusted blue paint and tangled jungle vines. The camera has a slight handheld sway, emphasizing the height from standing on top of the train. Cinematic high-contrast lighting, atmospheric smoke particles, 8k resolution, hyper-realistic textures, industrial decay. --ar 16:9

POV first-person perspective from inside the driver's cab of a heavy-duty industrial tow truck. Two dirty, worn yellow leather-gloved hands are gripping a large, weathered black steering wheel. Looking through a dusty, cracked windshield as the truck bounces slowly down a narrow, overgrown dirt path deep in a dense forest. Through the windshield, in the distance at the end of the path, the massive, derelict Thomas the Tank Engine is visible in a clearing. Thomas looks giant and rusted, with a faint trail of smoke rising from his funnel. Sunlight streaks through the dirty glass, creating lens flares and illuminating dust on the dashboard. The camera has a bumpy, realistic vehicle motion. Hyper-realistic textures, cinematic lighting, 8k resolution, extreme detail. --ar 16:9

POV first-person perspective, standing in a jungle forest clearing looking up from a low angle. A massive industrial yellow crane arm looms overhead. Heavy-duty taut steel cables and thick forged iron hooks are attached to the front buffer and rusted boiler of the giant, life-sized Thomas the Tank Engine. The locomotive is slowly being lifted off the ground. Huge chunks of mud, flakes of rust, and snapping jungle vines fall from the massive drive wheels as they rise out of the overgrown grass. Two dirty yellow leather-gloved hands are visible at the bottom of the frame, holding onto a thick tether rope to steady the enormous weight. The train's weathered, cracked face tilts slightly as it rises. Cinematic lighting, atmospheric dust and debris falling through sunbeams, hyper-realistic textures, 8k resolution, extreme industrial scale. --ar 16:9

POV first-person perspective, looking down at a massive, heavy-duty industrial workbench inside the vast hangar garage. Two dirty, grease-stained yellow leather-gloved hands enter the frame. One hand reaches out to grip the worn wooden handle of a large, heavy steel ball-peen hammer resting on the table. The workbench is cluttered with hyper-realistic mechanical detail: oily rags, scattered iron bolts, a massive rusted wrench, and grease-smudged blueprints for a steam engine. The locomotive is not visible in this shot, focusing entirely on the tools and the table. Cinematic top-down lighting with deep shadows, extreme close-up detail on the texture of the weathered glove and the scarred metal of the hammer. High-contrast, 8k resolution, atmospheric dust on the table surface. --ar 16:9

POV first-person perspective, extreme close-up standing directly in front of the massive Thomas the Tank Engine inside the hangar garage. The camera is focused on the locomotive's front buffer beam (the bumper), which is twisted, heavily rusted, and covered in dried forest mud. Two dirty, grease-stained yellow leather-gloved hands are in frame. One hand holds a large steel chisel against a rusted iron rivet, while the other hand swings a heavy steel hammer, striking the chisel with force. On impact, sparks fly and large flakes of orange rust and old blue paint blast off the metal surface. The heavy iron bumper vibrates and begins to loosen from the frame. Cinematic high-contrast lighting, sharp focus on the impact point with a shallow depth of field blurring the vast garage in the background. 8k resolution, hyper-realistic metal and leather textures, atmospheric dust and debris. --ar 16:9

POV first-person perspective, cinematic wide-angle shot. The massive, fully detached rusted iron bumper beam is now held in two dirty, grease-stained yellow leather-gloved hands, pulled away from the locomotive. The camera is very close to the heavy piece of metal, showing deep rust craters and jagged edges where it was once bolted. In the background, the giant Thomas the Tank Engine looms, now looking "raw" and exposed where the bumper used to be, revealing the heavy steel chassis and large industrial rivets. The vast hangar garage is visible behind the train, with sunlight beams cutting through atmospheric dust. The camera has a slight handheld shake to convey the weight of the metal being held. Hyper-realistic textures of cold iron and worn leather, high-contrast lighting, 8k resolution, extreme industrial detail. --ar 16:9

POV first-person perspective walking through a separate, dimly lit section of the industrial warehouse storage area. The giant locomotive is NOT visible in this shot. The room is filled with heavy metal shelving and wooden shipping crates. Two yellow leather-gloved hands reach down into a large open crate. Inside the crate, resting on protective packing material, is a brand-new, massive, and heavy red iron bumper beam. The red paint is pristine, glossy, and reflects the overhead warehouse spotlights with a metallic glint. One hand grips the cold, smooth edge of the new bumper to lift it. Cinematic high-contrast lighting, deep shadows in the background warehouse, floating dust motes in the light beams. Hyper-realistic textures of polished paint and worn leather gloves, 8k resolution, extreme industrial detail. --ar 16:9

POV first-person perspective, cinematic movement shot. Two dirty yellow leather-gloved hands are carrying the heavy, detached red iron bumper beam away from the locomotive.[1] The camera is tilted down slightly, showing the massive weight of the rusted, mud-caked red metal being lugged forward.[1] In the background, the giant Thomas the Tank Engine is visible with his front chassis exposed and raw where the bumper used to be.[1] The man walks across the vast concrete garage floor toward a heavy steel workbench.[1] Resting on a wooden crate in the distance is a brand-new, polished bright red replacement bumper beam, reflecting the overhead hangar lights with a metallic glint.[1] Handheld camera motion with a heavy, rhythmic walking sway to convey the physical effort.[1] Cinematic high-contrast lighting, floating dust particles, 8k resolution, hyper-realistic textures of rusted iron vs. new paint.[1] --ar 16:9

POV first-person perspective, extreme close-up inside the industrial hangar. Two dirty yellow leather-gloved hands are working on the front of Thomas the Tank Engine. One hand holds a heavy screwdriver, tightening a polished chrome bolt into a brand-new, glossy, bright red front bumper beam. The red bumper is the only clean part, reflecting the hangar lights. In sharp contrast, the rest of the giant locomotive is heavily derelict and broken: Thomas's huge face is covered in deep cracks, grime, and peeling paint. His massive blue boiler is covered in large patches of bubbling orange rust, flaking paint, and oily grease stains. The background shows the dark, vast garage with mechanical parts scattered on the floor. Cinematic high-contrast lighting, sharp focus on the bolt and screwdriver, atmospheric dust, 8k resolution, hyper-realistic textures. --ar 16:9

POV first-person perspective, hyper-realistic cinematic shot inside the industrial hangar. Two yellow leather-gloved hands hold a high-pressure industrial foam cannon device. One hand pulls the trigger, and a thick, heavy blast of brilliant white chemical cleaning foam erupts from the nozzle, completely drenching the giant, derelict Thomas the Tank Engine. The thick, snowy suds cling to the rusted blue boiler and slowly slide down the huge, cracked face of the locomotive. The white foam creates a stark contrast as it covers the orange rust patches and dark grease stains. Chunks of foam splatter onto the wheels and the new glossy red bumper. Cinematic high-contrast lighting, the foam reflects the bright overhead hangar lights. Atmospheric workshop dust, 8k resolution, extreme detail on the bubbling, dripping foam texture. --ar 16:9

POV first-person perspective, cinematic industrial shot inside the hangar. Two yellow leather-gloved hands are gripping a heavy-duty industrial hose with a high-pressure nozzle. A powerful, focused jet of clear water blasts against the side of the massive, rusted Thomas the Tank Engine. The water is not foam, but a clear, violent stream that hits the rusted blue boiler, sending spectacular splashes and mist into the air. Decades of brown forest mud and loose orange rust flakes are being stripped away by the pressure, revealing the original weathered blue paint and the faded yellow number '1' on the side. Sheets of water cascade down the locomotive's body and drip onto the concrete floor. The wet metal reflects the bright overhead hangar lights with sharp specular highlights. Cinematic high-contrast lighting, handheld camera movement with slight vibration from the hose pressure, 8k resolution, extreme detail on the water physics. --ar 16:9

POV first-person perspective, sitting high up on the curved, massive blue boiler of Thomas the Tank Engine inside the industrial hangar. The camera is tilted down, looking at the work surface. Two dirty yellow leather-gloved hands are in frame. One hand holds a professional metal-paint container, while the other hand uses a thick brush to apply a heavy, glossy coat of vibrant "Sodor Blue" paint directly over a large, scaly patch of deep orange rust. The wet paint is thick and smooth, completely hiding the rough, bubbling texture of the decay in a single, satisfying stroke. The wet surface reflects the bright overhead hangar lights. In the background, the vast, shadowy garage floor and scattered industrial tools are visible with a shallow depth of field. Cinematic high-contrast lighting, atmospheric workshop dust, 8k resolution, hyper-realistic textures of wet paint and crusty rust. --ar 16:9

POV first-person perspective, standing extremely close to the front side of a massive, life-sized Thomas the Tank Engine inside a vast industrial hangar. ONLY TWO HANDS ARE IN FRAME: the

right hand holds a white rag and is gently polishing the side of the boiler, while the left hand is resting naturally against the blue metal. At the front of the train, a thick, solid, and brand-new bright red iron bumper beam (buffer beam) is prominently visible, gleaming with fresh glossy paint and polished chrome buffers. The train is colossal; the camera is positioned so close that Thomas's huge, perfectly restored face towers high above, smiling down. The paint is a deep, vibrant "Sodor Blue" with a mirror-like finish. The hangar background is blurred with atmospheric dust and bright overhead lights. Hyper-realistic textures, 8k resolution, cinematic lighting, zero extra limbs. --ar 16:9

Промпты для анимации

1. POV first-person perspective, animating from this exact starting frame. The camera begins to move forward with a realistic, rhythmic handheld walking motion. The two dirty yellow leather-gloved hands reach forward and physically push aside the tangled green vines and mossy branches. The sunlight filtering through the canopy shifts and creates shimmering lens flares as the viewer moves deeper into the dense grove. Atmospheric dust particles float in the light beams. Extreme detail on the texture of the weathered leather gloves and the rustling leaves. Hyper-realistic forest environment, cinematic lighting, 4k, fluid and natural motion. --ar 16:9

2. POV first-person perspective, animating from this exact frame. The camera moves forward with a slow, steady walking motion into the clearing. The dirty yellow-gloved hands reach into the center of the shot, grabbing the tangled vines and mossy branches that are blocking the view. The hands physically pull and push the foliage aside to fully reveal the massive, rusted Thomas the Tank Engine. As the character walks closer, the locomotive looms larger in the frame, showing extreme detail on its weathered face and flaking blue paint. Sunlight flickers and shifts through the canopy, creating dynamic lens flares. Atmospheric dust motes and forest insects are visible in the light beams. Hyper-realistic textures, 4k, cinematic handheld camera movement. --ar 16:9

3. POV first-person perspective, animating from this exact frame. The camera is very close to the massive, derelict Thomas the Tank Engine. The character's right hand, wearing a dirty yellow leather glove, slowly and deliberately wipes away a thick patch of green moss from the train's white face, revealing more deep cracks beneath. The left hand reaches out to touch a scaly patch of orange rust on the blue boiler; small flakes of rusted metal and dried mud fall to the ground as the fingers move across the surface. Sunlight shifts through the trees, causing warm lens flares to dance across the metal. The camera has a very slow, inquisitive handheld sway, as if the person is leaning in to inspect the damage. 4k, hyper-realistic textures of cold iron and soft moss, cinematic lighting, ASMR atmosphere. --ar 16:9

4. POV first-person perspective, animating from this exact frame. The truck begins to drive forward, bouncing and vibrating rhythmically as it moves down the muddy, uneven forest path. The dirty yellow-gloved hands shift slightly on the black steering wheel, making small adjustments to steer. Outside the dusty, cracked windshield, the dense jungle trees pass by on both sides. In the center of the path, the massive, rusted Thomas the Tank Engine grows larger as the truck gets closer. A thick plume of dark smoke billows and curls from Thomas's red funnel. Sunlight flickers through the moving canopy, causing shifting shadows and lens flares inside the cab. Hyper-realistic textures of grease and glass, cinematic 4k, realistic vehicle physics. --ar 16:9

5. POV first-person perspective, animating from this exact starting frame. The character's yellow leather-gloved hands grip the jagged, rusted metal rim of the chimney. Thick, oily dark gray smoke billows and swirls rapidly out of the dark hole, curling around the fingers and rising into the sunlight. The entire chimney and the blue boiler beneath vibrate slightly, suggesting a rhythmic, deep mechanical pulsing from deep inside the old engine. Sunlight streaks through the forest canopy, creating flickering lens flares as the smoke passes through the light beams. The camera has a slight handheld shake, emphasizing the character leaning in to peer down into the smoke. Hyper-realistic textures of crusty orange rust, weathered leather, and fluid smoke movement. 4k, cinematic industrial atmosphere. --ar 16:9

6. POV first-person perspective, animating from this exact frame. The massive industrial yellow crane arm slowly begins to retract, pulling the steel cables tight. The life-sized Thomas the Tank Engine groans and creaks as it is lifted higher off the forest floor. Huge chunks of wet mud, loose orange rust flakes, and small rocks fall from the massive blue iron wheels as they rise into the air. The character's hands, in dirty yellow leather gloves, strain and vibrate as they pull the thick steel tether ropes to steady the enormous swaying weight of the locomotive. Thomas's mossy, cracked face tilts slightly as he rises. Sunlight streaks through the canopy, illuminating the falling debris and floating dust. Epic cinematic scale, slow-motion physics, 4k, hyper-realistic textures of rusted metal and frayed rope. --ar 16:9

7. POV first-person perspective, animating from this exact starting frame. The camera has a very subtle, natural handheld sway and a slow, barely perceptible forward push (dolly in) toward the locomotive. The character is standing still, observing the massive, derelict Thomas the Tank Engine. In the foreground, the fingers of the left hand on the workbench twitch slightly, and the raised right hand has a gentle, natural micro-movement. Atmospheric dust particles float through the bright light beams coming from the hangar ceiling. A faint, thin wisp of dark smoke slowly curls and drifts from Thomas's rusted funnel in the background. The lighting is high-contrast, with the overhead warehouse lights creating deep shadows. Hyper-realistic textures of worn leather, rusted gears, and mossy iron. 4k, cinematic and immersive atmosphere. --ar 16:9

8. POV first-person perspective, animating from this exact starting frame. The character's right hand, wearing a dirty yellow leather glove, slowly lifts the heavy steel ball-peen hammer off the blueprints. The hand rotates the hammer slightly from side to side, examining the pitted texture of the iron head and the grain of the worn wooden handle. As the hammer tilts, sharp specular highlights from the overhead hangar lights glint and shift across the polished steel surface. The left hand remains steady on the workbench, with fingers making natural micro-movements. Atmospheric dust motes float through a shaft of light hitting the oily table. The camera has a subtle, inquisitive handheld sway. Hyper-realistic textures of leather, rusted bolts, and grease. 4k, cinematic focus. --ar 16:9

9. POV first-person perspective, animating from this exact starting frame. The character's right hand swings the heavy steel hammer in a rhythmic and forceful striking motion, hitting the top of the metal chisel. On every impact, a burst of bright sparks erupts, and large shards of orange rust and flakes of old red paint fly away from the bumper toward the camera. The massive iron bumper beam vibrates and jolts with each blow, visibly loosening from the locomotive's chassis. The camera has a slight jarring recoil shake on every hammer strike to simulate the physical impact. In the background, the derelict Thomas the Tank Engine remains steady under the bright warehouse lights. Hyper-realistic textures of cold iron, sparks, and weathered leather. 4k, high-impact cinematic action. --ar 16:9

10. POV first-person perspective, animating from this exact starting frame. The character exerts heavy physical force on the metal pry bar, wedging it deeper into the rusted crack. The right hand grips the bumper tightly, pulling outward with visible strain. The massive red iron bumper beam groans and begins to jolt, slowly pulling away from the locomotive's chassis. As the gap opens, a heavy cascade of orange rust flakes, dried mud, and metallic debris falls to the hangar floor. The bumper eventually detaches completely, sagging downward under its own weight. The camera has a realistic handheld shake and a slight jarring motion to simulate the physical struggle. Cinematic high-contrast lighting, 4k, hyper-realistic textures of scaly rust and weathered leather. --ar 16:9

11. POV first-person perspective, strictly locked to the character's eye-level. Animating from this exact starting frame. ONLY TWO HANDS ARE VISIBLE, attached to the bottom corners of the frame. The character's yellow-gloved hands exert heavy physical effort, lifting the mud-caked, rusted red bumper beam upward. The camera then pivots 45 degrees to the right and begins a heavy, rhythmic walking motion across the concrete garage floor. The derelict Thomas the Tank Engine on the left side of the frame slides out of view as the character walks. The camera bobs vertically with each footstep to simulate the weight of the heavy metal being carried. The focus remains on the rusted bumper in the hands and the approaching steel workbench in the distance. NO THIRD-PERSON CHARACTERS, no extra limbs. Hyper-realistic industrial textures, cinematic warehouse lighting, 4k. --ar 16:9

12. POV first-person perspective, animating from this exact starting frame. The character walks forward one final step to the wooden crate. Two yellow leather-gloved hands reach down into the crate; the right hand firmly grips the side of the brand-new red bumper, while the left hand touches the polished, mirror-like chrome surface of the circular buffer. The character then exerts physical force, slowly lifting the heavy, solid iron bumper beam upward out of the crate and toward the camera. As the bumper moves, the overhead warehouse spotlights create sharp, shifting metallic glints and sliding reflections across the glossy red paint and chrome. The camera has a natural handheld sway and a slight vibration to show the weight. Cinematic warehouse lighting, atmospheric dust motes, 4k, hyper-realistic textures. --ar 16:9

13. POV first-person perspective in a workshop. Animating hands in yellow work gloves. The right hand is physically twisting a heavy industrial screwdriver to tighten a chrome bolt into a brand-new, glossy red bumper. In the background stands a massive, derelict blue steam engine with a giant, cracked character face and rusted boiler. Cinematic hangar lighting, realistic mechanical movement, handheld camera vibration, hyper-realistic textures, 4k. --ar 16:9

14. POV first-person perspective, animating from this exact starting frame. The character's right hand, wearing a yellow leather glove, firmly grips the industrial foam gun as it vibrates with high pressure. A thick, powerful blast of brilliant white chemical cleaning foam erupts from the nozzle, drenching the giant Thomas the Tank Engine. The foam splatters against Thomas's rusted blue boiler and his large, cracked face, with thick snowy suds beginning to slowly slide and drip down the metal. In the foreground, the character's left hand rests steadily on the workbench, showing natural micro-movements. The camera has a subtle handheld sway and a slight recoil vibration from the foam pressure. Sunlight filters through the hangar ceiling, reflecting off the wet, bubbling textures of the foam. Hyper-realistic physics, 4k, cinematic industrial atmosphere. --ar 16:9

15. POV first-person perspective, animating from this exact starting frame. The character's right hand, wearing a yellow leather glove, directs a powerful, high-pressure jet of clear water against the massive, rusted Thomas the Tank Engine. The water blasts against the train's face and boiler, sending spectacular splashes and a fine mist into the air. As the water hits the metal, decades of

brown forest mud and loose orange rust flakes are visibly washed away, revealing clean patches of vibrant blue paint beneath. The left hand on the workbench remains steady with natural micro-movements. The camera has a natural handheld sway and a slight vibration from the hose pressure. Wet surfaces on the locomotive reflect the bright overhead hangar lights with sharp, dancing specular highlights. Sheets of water cascade down the boiler and wheels, pooling on the concrete floor. 4k, hyper-realistic water physics, cinematic industrial lighting. --ar 16:9

16. POV first-person perspective in a hangar. Animating hands in yellow leather work gloves. The right hand moves a paintbrush in a smooth, slow, and thick stroke, covering a scaly patch of orange rust with vibrant, glossy blue paint. The wet paint is thick and reflects the overhead warehouse lights. The left hand remains steady holding a blue paint can. Cinematic industrial lighting, hyper-realistic textures of wet paint versus crusty iron, handheld camera sway, 4k. --ar 16:9

17. POV first-person perspective, hands in yellow leather gloves wiping a massive blue locomotive with a white rag inside an industrial hangar, cinematic lighting, 4k.

18. POV first-person perspective in a lush green field. Animating from this frame. The restored blue steam engine with a happy face slowly chuffs away from the camera along the railway tracks. Action: The character's hand in a yellow leather glove waves slowly side-to-side in a farewell gesture. Action: Thick, rhythmic puffs of white steam billow from the train's funnel as it moves into the distance. Cinematic golden hour sunset lighting, heavy lens flares from the sun, hyper-realistic textures, 4k, emotional and triumphant atmosphere. --ar 16:9
