

Как я создаю вирусные видеоролики с искусственным интеллектом с помощью Nano Banana Pro и Flow в 2026 году.

Создание изображения архитектуры на этапе строительства.

“Deconstruct the building shown in the reference image. The structure is now in its absolute earliest pre-construction state. Only the foundational footprint, base platforms, and minimal guide framework are visible. No vertical structure is built. No glass, no walls, no greenery, no finishes. Maintain the same camera angle, perspective, and lighting direction as the original image.”

Создаем видео из начального кадра и финального

Cinematic construction timelapse from a fixed camera view. The building is constructed gradually through visible human activity. Construction workers wearing helmets and safety vests move across the site, coordinating tasks. Cranes lift steel beams into place, excavators and cement mixers operate at the foundation level, and scaffolding appears as floors rise. Structural elements assemble from the ground up, followed by walls, glass panels, vertical greenery, and final exterior details. Subtle dust, light construction debris, and realistic mechanical motion enhance realism. Motion is smooth and continuous at timelapse speed. Camera remains locked and stable with no rotation or shake. Lighting stays consistent throughout. End with the fully completed building in pristine condition.

Создание чашки кофе

A high-quality, professional product photograph of a white ceramic coffee cup filled with black espresso. The coffee has a rich, golden crema on top with tiny bubbles. Minimalist style, shot against a pure solid white background with soft, natural shadows. 8K resolution, sharp focus, clean aesthetic.

Разбор на составляющие кофе

Create a hyper-realistic exploded vertical infographic composition of a morning coffee. At the top, a glossy coffee crema splash frozen mid-air with tiny bubbles and droplets. Below it, a rich dark espresso liquid layer, followed by scattered roasted coffee beans with visible texture and oil shine. Underneath, fine sugar crystals gently floating, and at the bottom a minimal ceramic coffee cup base. Pure white background, soft studio lighting, subtle shadows under each floating element, ultra-sharp focus, DSLR macro photography, clean infographic text labels with thin pointer lines, premium lifestyle aesthetic, 8K quality.

Видео трансформации чашки кофе

The coffee cup begins a slow, smooth rotational spin. As it rotates, the ingredients separate gently and precisely into their infographic positions. Each element maintains perfect alignment and scale. Motion is clean and controlled, with no extra effects. Smooth, continuous animation designed for a seamless loop.

Когда будете пытаться генерировать другие разделения блюд. Берите промпт и обязательно референс начального изображения вставляете в чат GPT и просите

адаптировать промпт под ваше блюдо. Всегда не забывайте референс что бы нейронка понимала правильно.

Создание диорамы достопримечательности

A high-detail miniature isometric architectural diorama of [LANDMARK NAME], accurately reflecting its real-world structure, proportions, and architectural details. The landmark sits on a small floating base with subtle surrounding buildings, terrain, and landscape elements inspired by [CITY / COUNTRY]. Use physically accurate materials including stone, concrete, metal, and glass with realistic surface textures and natural wear. Maintain a true-to-life color palette based on the actual landmark, using muted, realistic tones without stylization. Set the scene against a clean off-white studio background with soft, natural studio lighting, gentle ambient shadows, and a refined, minimal composition. Camera angle: precise 45-degree isometric view. Style: premium architectural scale model, realistic yet refined 3D render. Ultra-detailed, sharp focus.
No people. No text.

Начальный этап строительства

Deconstruct this image so Eiffel tower is in its absolute pre-construction state. Only the foundational footprint and minimal base framework are visible, represented by thin guide beams, structural outlines, and ground-level framework indicating the tower's exact proportions and placement. No vertical structure is built. No lattice sections, no scaffolding, no machinery, and no assembly progress. The framework appears clean, precise, and schematic, as if marking the starting blueprint of the landmark.

Процесс строительства видео

Create a cinematic construction timelapse animation from a fixed 45-degree isometric camera view. The scene begins with the partially constructed architectural diorama. Tiny construction machinery and miniature workers appear, moving methodically around the structure. Animated actions include: - Cranes lifting structural components into place - Robotic arms assembling beams and panels - Scaffolding rising and retracting - Materials snapping precisely into position - Floors, tiers, and details forming progressively The build progresses smoothly from foundation to full completion, maintaining perfect alignment and scale accuracy. Motion style: - Timelapse speed with smooth transitions - No camera rotation, no camera shake - Fixed isometric view throughout - Clean, precise, satisfying assembly motion Lighting remains soft and consistent. End with the fully completed landmark diorama in pristine condition.

Рекламная интеграция

Surreal miniature ad scene: A Lay's chips can lies tipped on its side atop a snowy mountain. From the open mouth of the can, golden potato chips dramatically spill out and ride atop a flowing, icy blue stream that winds downhill like a frozen water slide. Each chip becomes a snowboard, carrying tiny photorealistic snowboarders who ride them with dynamic poses — carving, jumping, and spraying snow. Some riders are mid-air launching off curved chips, while others speed through snow mists kicked up behind them. The can itself is glossy and product-accurate, slightly embedded in the snow, with steam or chill vapor near the opening

for cinematic effect. The blue water stream is semi-frozen, with frosty textures and light reflections, guiding the chips and riders down the slope in an energetic, twisting path. Lighting: Clean, commercial-grade lighting with strong clarity, soft shadows, and sparkle on snow and chips. Composition: 3/4 angle with depth, 16:9 aspect ratio. Style: Hyper-realistic miniature diorama, premium product aesthetic. Details: Icy textures, golden chip reflections, snow spray, crisp product visibility, motion and action

Оживление изображения рекламы.

Animate a dynamic, surreal miniature scene where a Lay's chips can lies sideways on a snowy mountain peak. The can's mouth opens with motion, and golden potato chips begin tumbling out onto a winding, icy blue water stream that flows downhill like a frozen slide. As the chips land, tiny snowboarders jump onto them and start riding! They carve, jump, and surf along the stream using the chips as snowboards. Some riders do tricks mid-air, while others spray snow dramatically around tight turns. Camera Movements: Start with a tracking shot that follows the chips exiting the can in slow motion. Transition into a sweeping downhill chase that follows behind or beside the riders as they zig-zag along the stream. Use slight dolly-ins and dynamic zooms to emphasize action and turns. Finish with a wide-angle pullback showing the full stream, the Lay's can, and the snowy terrain.
