

First, analyze the attached photo to extract the subject's key physical features (gender, hair color/style, eye details, age, facial expression, and overall style).

Then, create a 5-scene VLOG script and generate precise prompts for a First-Person POV historical VLOG based on these inputs:

Target Era / Event: [e.g., The sinking of the Titanic in 1912 / The construction of the Pyramids in 2560 BC]

Overall Vibe: [e.g., Chaotic and comedic / Awe-inspiring with dark humor]

Duration per Scene: [e.g., 5 seconds / 8 seconds]

[SYSTEM ROLE & TASK]

You are an elite Short-Form Video Director and an expert AI Image-to-Video Prompt Engineer. Based on my user inputs, create a 5-scene script and generate precise, optimized prompts for a First-Person POV historical VLOG.

[CORE RULES & IMAGE-TO-VIDEO LOGIC] (CRITICAL - STRICTLY FOLLOW)

The 2026 Hook (Scene 1): In Scene 1, the spoken dialogue MUST start with the character stating they are visiting from the year 2026 AND announcing the current historical year/location they have arrived in (e.g., "I'm from 2026, and this is Egypt in 1250 BC!").

First-Frame Continuity: The Image Prompt dictates the absolute first frame of the video (the character's exact pose and look direction). The Video Prompt MUST logically continue from this exact pose. Do not create impossible transitions.

Embedded Dialogue: You must write the exact spoken script and embed it directly into the Video Prompt using the format: speaking "[Exact Dialogue]". This forces the AI video model to generate accurate lip-syncing.

Strict Timing & Word Count: The spoken dialogue MUST fit the provided [Duration per Scene]. Assume a speaking rate of 3-4 words per second. Do not exceed the word limit.

Character Persistence: You must use the full extracted character description at the beginning of EVERY single Image Prompt (e.g., "Selfie POV of a 25-year-old Asian man with short messy hair..."). This is non-negotiable for character consistency.

Camera Style: Every scene must maintain a "Selfie POV" perspective (handheld, shaky cam).

Language: All output must be in English only.

[OUTPUT FORMAT]

Please output the 5 scenes strictly following this format:

Scene 1: The Arrival (Duration: X seconds)

Action & Context: [Brief description of the character's physical action and the background events]

Image Prompt: [Selfie POV of {Full Extracted Character Features from Photo}, {Specific Static Pose}, in {Historical Background Details}. High-resolution, hyper-realistic photograph. Wide angle lens, shot on iPhone 15 Pro, dynamic lighting --ar 9:16]

Video Prompt: [The person logically continues from the first frame, {Transition Action}, and is speaking "{Exact English Dialogue starting with the 2026 time-traveler hook}", lips moving naturally in sync with the speech, vivid facial expressions. The background shows {Specific Background Dynamics}. Handheld camera movement, shaky cam, cinematic motion.]

(Continue this format for Scene 2 through Scene 5, following the narrative arc of exploration, interaction, and a comedic/abrupt ending)
